Mobile pH Balancing

At Smart Storm we have developed an innovative solution to an emerging problem.

Developed in response to a civil engineering company's requirement, our team of engineers designed and built a mobile pH balancing unit to ensure the highly alkaline run off from a large infrastructure project in the Thames area, is within consents.

Our mobile pH balancing unit is ideal for construction sites, or applications where temporary pH correction is needed. The unit can be configured to come in two options:

Option 1 - ideal for construction sites where chemicals are restricted.

- CO_2 is used to react with and correct the highly alkaline run off from concrete usage
- This has environmental, and health and safety advantages

Option 2 - suited to applications of acidic and alkaline disharge

- Uses chemicals to balance varying pH levels
- Chemicals are supplied in double skin storage containers
