Installation

Planning

Design of a bespoke treehouse with balance/agility course:

The bespoke treehouse was the main feature of this project and was deigned specifically for this location. It was requested that a class of 22 children with their teacher should be able to hold part of their classes outdoor during the summer along with being a place for the children to relax during their breaks.

Design

The attached agility/balance course, suitable for children up to 12yrs, was integrated with the exiting trees to give a more natural forested feel allowing the children to play with nature and aid physical development in this previously under-used area. The equipment used was manufactured specifically to suit the clients requests.
