

Gate Systems:

Diamond™ Sliding Gates

Simply plug and play

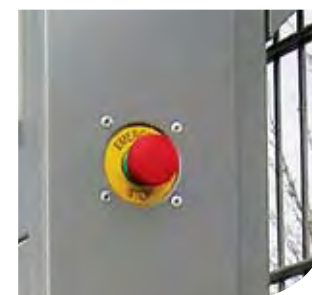

Ideal for situations where space is restricted, sliding gates allow quick, easy and regulated access through large entrances.

The Diamond automated gate system is one of the most modern available in Europe. It is delivered as one unit, with all the requisite electronic and mechanical components already in place. This 'plug and play' design means installation is quick and easy with gates fully tested before leaving the factory. It has an extremely smooth and quiet mechanism making it ideal for prestigious sites. Using a cantilever system, the gate does not use a track in the ground. The Diamond gate conforms to the strict demands laid down in BS EN 13241, and comes with a flashing warning light, passage lighting and security strip. A 2 year or 8000 movement guarantee on parts assures the quality of this product.

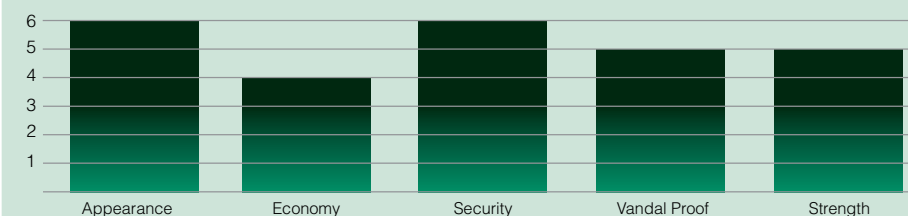

The motor is totally enclosed in the gates lower beam and so is protected from the elements and potential vandalism

Specifications

| Height Available | Opening | Infill Available | Finish |
|------------------|---------|-----------------------|--|
| 1.25m | 4m | Vertical Bar (hollow) | Steel parts galvanised and powder coated. (See page 67 for colour options) |
