

INFORMATION

Regulations

The **Personal Protective Equipment** at Work Regulations 1992, require head protection to be worn where there is a possibility of the head being injured.

The Construction (Head Protection) Regulation imposes a mandatory requirement on employers in the construction industry to supply head protection for their employees.

Production Standards

- EN397** = Specification for Industrial Safety Helmets
- EN346** = Specification for light duty bump cap helmets
- EN812** = Specification for bump and scrape protection

Assessment of Hazards

A comprehensive assessment is essential to establish the need for head protection within the work area and to determine the suitability of products.

Typical hazards

- Construction • Food Processing
- Foundries • Mining • Offshore
- Tree Felling • Abattoirs • Chemicals

Lifespan

Although there is no current legislation concerning the expected lifespan of safety helmets, Hallmark highly recommend they are replaced every 2-5 years.

Excessive wear and tear will drastically reduce both the suggested lifespan and helmet performance should it be put to the test.

If your helmet becomes cut or badly scratched it should be discarded immediately.
