

Bathroom and shower room fans for wall, window and ceiling installations

More moisture is produced in bathrooms than anywhere else in your home.

Bathrooms and shower rooms are relatively cool areas. Moisture from hot water in showering, bathing and washing is quickly absorbed into the air, which warms rapidly increasing further its capacity to hold water vapour. The hard surfaces of the bathroom – tiling, mirrors, painted surfaces and windows change temperature far more slowly and, being cooler than the air, form water droplets seen as ‘misted up’ mirrors and windows.

This warm ‘wet’ air quickly migrates to adjacent rooms condensing on cooler unventilated surfaces such as the back of wardrobes and increasing the humidity level throughout the house.

Matters can be aggravated if the room is also used for drying clothes.

Today, condensation problems like these are more commonplace as we shower

more and place greater emphasis on air tightness in our homes.

Toilets present a different problem. Unchecked, odours are unpleasant and embarrassing.

The solution is to extract moisture and odours at source. In bathrooms and toilets the most effective position is diagonally opposite the door allowing a gentle flow of air across the room. In showers, it is often best positioned directly over the shower cubicle.

Which solution is best for me?

IEE electrical regulations define bathrooms as areas of increased electrical hazard. The illustrations in the Bathroom Zoning section show the zones in which fans of differing IP rating can be installed. As a rule, look out for IPX4 or higher. For complete peace of mind Xpelair LoVolt models are available which have a separate Safety Extra Low Voltage transformer fitted outside of the splash area and operate the fan at 12V.

For installations that fall within the scope of Building Regulations the extract

requirements are 15 l/s for bathroom and shower rooms, and 6 l/s for toilets.

If the room does not have an opening window then a fan with a built in timer should be selected. This will continue to run for at least 15 minutes after the room has been vacated.

Axial fans are suitable for through the wall or window fitting in most homes. For high-rise and exposed (e.g. coastal) locations, centrifugal fans will cope better with gusty conditions. Centrifugal and mixed flow units have a better pressure characteristic, which makes them more suitable where a ducted solution is required. For showers, Xpelair offers kits for simple above ceiling extract ventilation through a soffit.

Air replacement is particularly important in these rooms as the doors are shut when occupied. A fan can only function if there is an equal flow of air to that being extracted. This can be achieved by maintaining a small gap beneath the door and the floor covering or by fitting a slim air replacement grille to the door.

Xpelair Premier DX180, DX200 & CF20

Centrifugal extract and condensation control fans

Key features

Type:	DX centrifugal extract and CF condensation control fans
Application:	Domestic bathrooms, shower rooms, toilets and utility rooms
Control options:	Pull cord, timer and humidistat
Legislation:	Conforms to Building Regulations
Hole size:	117mm (wall) 120mm (window)

The Range

The efficient and stylish Premier range of pressure developing fans is designed specifically for domestic applications, including bathrooms, shower rooms, toilets and utility rooms where longer duct runs are required. They are also suitable for commercial applications such as hotel rooms, office toilets, commercial bathrooms, and for coastal installations.

All models have a gloss white casing with clean and sleek appearance. A two part casing means Premier fans can easily be recessed or surface mounted. They can be fitted into ceilings or studwork walls in recesses as little as 50mm deep using the side entry knockout provided, an FDA adaptor and Profile 29 flat duct. Alternatively 100mm circular ducting can be used. All feature an automatic air

operated back draught shutter and the **CF20** range are supplied with a brown 100mm external outlet grille for wall or soffit fixing. All models come complete with a universal mounting kit.

The clip off front cover and removable fan blade on all models allow easy cleaning and maintenance. All also have a neon indicator (except DX180/T).

DX200 and **CF20** models are IPX5 rated where-as the **DX180** models are IPX4. All are BEAB approved. They are all suitable for 220-240Vac 50Hz mains operation. Motors are totally enclosed and maintenance free for life, with self aligning bearings and a thermal cut-out. All electronics and wiring terminals are fully protected.

Models

Premier DX180 Ref. 91181AW

- Single speed centrifugal unit
- Operated by remote switch

Premier DX180T Ref. 91182AW

- Single speed centrifugal unit with timer
- Built-in fixed 20mins run On period after the light has been switched Off

Premier DX180H Ref. 91183AW

- Single speed centrifugal unit with humidistat
- On/Off humidistat adjustable 50-90% RH

Premier DX200 Ref. 91013AW

- High performance centrifugal unit
- Choice of 2 set speeds

Premier DX200T Ref. 91014AW

- High performance centrifugal unit with timer
- Room size selector matches extract performance for improved efficiency

- 'QuickVisit' delay feature prevents fan from running should light be switched On/Off again within 2mins
- Mechanical trickle ventilation facility
- Built-in run-on period after light switched Off. User adjustable from 30s-20mins

Premier CF20 Ref. 91015AW

- High performance condensation control centrifugal unit
- Step-speed, user adjustable humidistat
- Room size selector matches extract performance for improved efficiency
- Tricklevent and pull cord manual override
- Includes external wall grille

Premier CF20T Ref. 91016AW

- All the features of CF20 plus:
- Auto run-on after light switched Off
- 'QuickVisit' delay feature prevents fan from running should light be switched On/Off again within 2 mins

Controllers

Manual Override Switch MOS Ref. 90199AW

Provides switching between manual and automatic operation. For use in conjunction with remote humidistat

Remote Humidistat XRH Ref. 21856AW

Stand alone humidistat switches fan On/Off when RH reaches pre-set levels. Complete with pullcord override switch

Remote Time Delay Unit DT20B Ref. 21850AW

User adjustable run-on timer (2-20mins)

Passive Infrared Sensor XPIRA Ref. 21871AA

Activates fan via body movement. Ideal for infrequently used public spaces. Built in timer to prevent nuisance tripping

The Range

Splash about with complete peace of mind. The Safety Extra Low Voltage (SELV) versions of the Premier DX200 and CF20 pressure developing centrifugal fans are ideal for use in shower rooms, bathrooms with showers and other zone 1 and zone 2 wet areas. Whilst they are designed specifically for domestic applications, they are also suitable for commercial applications where walls are regularly hosed down. The SELV system consists of a 12V fan unit which can be safely installed in the spray area of a bath or shower, with the transformer located outside the spray area.

Premier models **LVDX200 & LVCF20** conform to Building Regulations covering mechanical ventilation for toilets, bathrooms and utility rooms. Importantly they exceed the IP requirements for zone 1 and zone 2 as defined by IEE Wiring Regulations (16th Edition) BS 7671:2001, and are rated IPX5. The motor is totally enclosed and fitted with self aligning

bearings and thermal overload protection. The motor insulation is class B making them suitable for ambient temperatures up to 40°C.

Premier SELV fans have the same clean and sleek styling as the rest of the Premier range, with a white gloss body and fascia. They are designed for easy installation in walls, ceilings, windows or ducted installation at any angle, and **LVCF20** models come complete with a brown 100mm grille for wall or soffit fixing. All models come complete with a universal mounting kit and an automatic backdraught shutter.

The two part casing permits recessed or surface mounting, and can be fitted into ceilings and studwork wall recesses as little as 50 mm deep using the top entry knockout provided and an FDA adaptor and Profile 29 flat duct. Alternatively 100mm diameter circular duct can be used. A clip-off front and removable fan blade make for easy cleaning.

100mm axial extract fans

Key features

Type: **Axial extract fans**

Application: **Domestic bathrooms, shower rooms and toilets**

Control options: **Pull cord, timer, humidistat and PIR**

Legislation: **Conforms to Building Regulations**

Hole dia: **115mm (wall)
125mm (window)**

The Range

A comprehensive range of stylish, compact and easy to install single speed fans. Suitable for a wide range of domestic applications including bathrooms, shower rooms and toilets, including zones 1 & 2. Also suitable for commercial applications such as hotel bathrooms, office toilets and other small rooms.

DX100 models have a softly curved flowline grille design which will blend into wall or ceiling décor, whilst the shallow depth of the outlet spigot ensures compact window installation. All models come complete with a universal mounting kit suitable for wall, ceiling and window mounting (in single glazing up to 6mm) applications. The DX range includes

an air operated backdraught shutter, outer grille and ducting. Control options include integral pull cord and timer; humidistat and PIR options offer automatic control.

XX100 models are supplied without a kit and are ideal for replacement applications or where a suitable outlet already exists.

All models are IPX5 rated (except **DX100PIR**) and BEAB approved, demonstrating accredited levels of safety. They are all suitable for 220-240V 50Hz mains operation, have lubricated for life motors, Class B insulation for operation in ambient temperatures up to 40°C and are fitted with a thermal cut out.

Safety Extra Low Voltage 100mm axial extract fans

Key features

Type:	Safety Extra Low Voltage axial extract fan
Application:	Domestic bathrooms, shower rooms and toilets
Control options:	Pull cord, timer, humidistat & PIR
Legislation:	Conforms to Building Regulations
Hole dia:	115mm (wall) 125mm (window)

The Range

Water, water everywhere and none in the right place!

Whether you are showering, or leaving the kids splashing in the bath, water gets everywhere. Xpelair **LV100** fans are 12V Safety Extra Low Voltage (SELV) units offering complete peace of mind. These fans are specifically designed to be installed directly in or over the splash area zone 1 in complete safety, with the SELV transformer sited out of reach of any person using the bath or shower.

The front fascia with its softly curved flowline grille design will blend into wall or ceiling décor, whilst the shallow depth of the outlet spigot ensures compact window installation. All models come complete with a universal mounting kit suitable for wall, ceiling and window mounting (in single glazing up to 6mm) applications.

The kit includes an air operated backdraught shutter and all models are supplied with a 12V SELV transformer. Control options include integral pull cord and timer. Humidistat and PIR options offer automatic control.

The **LV100** range conform to Building Regulations mechanical ventilation for toilets and bathrooms. The Xpelair SELV system exceeds the IP requirements for zone1 and zone 2 as defined by IEE wiring Regulations (16th Edition) BS 7671:2001. All models are IPX5 rated and BEAB approved, demonstrating accredited levels of safety. They are all suitable for 220-240V 50Hz mains operation, have lubricated for life motors, Class B insulation for operation in ambient temperatures up to 40°C and are fitted with a thermal cut out.

Ref. 90849AW

- Single speed 12V SELV axial unit with humidistat, pullcord and remote SELV transformer
- Automatic On/Off operation by integral humidity sensor. Adjustable from 50-90% RH
- Adjustable timer function (2-20mins)
- Pullcord On feature overrides the auto-humidity sensor function
- Includes universal mounting kit
- Colour: White

LV100PIR

Ref. 90867AW

- Single speed 12V SELV axial unit with PIR detector and remote SELV transformer
- Automatic On/Off operation
- Integral passive infrared sensor
- Adjustable timer function (2-20mins)
- Includes universal mounting kit
- Colour: White

Typical Specifications on page 127.

Xpelair Slimline SL100 & SL150

Wafer thin axial fans

Key features

Type: **Axial extract fan with wafer thin grille**

Application: **Domestic bathrooms, shower rooms and toilets**

Control options: **Pull cord, timer & humidistat**

Legislation: **Conforms to Building Regulations**

Hole size: **100mm (SL100)
150mm (SL150)**

The Range

Meet the new generation of Xpelair **Slimline SL100** and **SL150** fans, with wall hugging wafer-thin grilles designed for modern living. They are white in colour and are ideal for domestic bathrooms, shower rooms, toilets and other small rooms. With an internal projection of only 15mm, the 100mm Xpelair **Slimline** unit is one of the lowest profile bathroom fans available. For bigger bathrooms **Slimline** is also available in a 150mm size offering performance and style.

For rooms with no opening windows **Slimline SL100** is available with a built-in overrun timer. Humidistat models are available for shower rooms and heavily used bathroom applications. Ordering is straight-forward: simply select the size

and control option required, then add the appropriate window or wall kit.

But the **Slimline** range doesn't just have a pretty face, installation is simple too. All **Slimline** models have two adjustable QuickClamp fixings which make traditional wall plug and screw fixings a thing of the past.

The IPX4 rated units fully meet the requirements of the Building Regulations for bathrooms, toilets and kitchens and the IP requirements for zone 1 and zone 2 as defined by the IEE Wiring Regulations (16th Edition) BS7671:2001. All models are suitable for a supply voltage of 220-240V 50Hz and ambient temperatures up to 40°C.

Xpelair CentrX

Centrifugal panel fans

Key features

Type:	Single speed centrifugal panel fans
Application:	Domestic bathrooms, shower rooms, toilets and utility rooms
Control options:	Pull cord, timer & humidistat
Legislation:	Conforms to Building Regulations
Hole size:	150mm (CT100) 100mm (CT100+)

The Range

CentrX is a range of two sizes of pressure developing centrifugal panel fans for ducted or through the wall applications. They are the ideal solution for ducted applications where extra pressure development is required, including toilets, bathrooms, shower rooms, utility rooms and kitchens. They are recommended in place of an axial fan in exposed coastal situations or exposed high rise applications. They are also suitable for commercial applications for the ventilation of small internal rooms.

The slim stylish grille is easily recognisable as Xpelair, with a bellmouth entry and finger guard through which air is drawn directly into the eye of the high performance centrifugal fan. The spigot outlet on both sizes of unit is only 100mm reducing space requirements for flexible ducting or Profile 60 rigid flat ductwork.

For simplified installation models are available with a built-in overrun timer and humidistat. They can be installed at any angle. All have an 'On' indicator light and a maintenance free motor with sealed for life bearings and safety thermal overload protection.

Xpelair XIL Inline shower fan systems

Axial extract fans for shower cubicle applications

Key features

Type:	Inline single speed axial extract fans and systems
Application:	Domestic bathrooms and shower rooms
Control options:	Standard or timer
Legislation:	Conforms to Building Regulations
Hole size:	115mm (XIL100/XXS100) 140mm (XIL125) 165mm (XIL150)

The Range

Step out of the shower cubicle. Is the mirror 'steamed over'?...

There is another way.

Remove the cause of condensation at source with an Xpelair inline shower fan system.

With a neat grille installed directly over the shower, humid or moist air will be ducted away by a fan above the ceiling and onwards to a grille installed outside, typically in the soffit.

Will I be standing in a draught? No, air will not be pulled into a normal cubicle, only flow over it.

XXS100 fans are available on their own.

XIL fans are available in sizes of 100, 125 & 150mm and are only available as fan systems. The systems contain all the components necessary for a normal installation, comprising:

- inline fan
- 3m of flexible duct
- Four worm drive clips
- inline backdraught shutter (XIL100)
- Internal ceiling grille with sleek styling in white
- Outside soffit/wall grille

Xpelair inline shower fan systems exceed the IP requirements for zone 1 and zone 2 as defined by IEE wiring Regulations (16th Edition) BS 7671:2001. All electronics circuits and wiring terminals are fully protected. Motors are Class B lubricated for life, fitted with safety thermal overload protection and suitable for ambient temperatures up to 40°C.

Xpelair **XIL** systems conform to Building Regulations mechanical ventilation for toilets shower rooms and bathrooms.

Xpelair BriteX LoVolt & BriteX Turbo

Shower fan and light systems

Key features

Type:	Inline single speed axial extract fans and systems
Application:	Domestic toilets, bathrooms & shower rooms
Control options:	Standard or timer
Legislation:	Conforms to Building Regulations

The Range

Brighten up your showering experience.

Shut the door on your shower and you are probably standing in the darkest part of your bathroom. Xpelair **BriteX** range is designed to extract condensation laden air directly from above the shower whilst bathing the cubicle in warm light.

Xpelair **BriteX** kits include everything needed for a standard installation including a stylish ceiling inlet complete with bezel and 12V 50W sealed dichroic lamp, an inline extract fan, 12V Safety Extra Low Voltage (SELV) transformer, flexible ducting, duct ties and a soffit/wall grille. The kits are available in a choice of white or chrome bezel.

BriteX LoVolt is suitable for shorter duct runs (3m duct supplied) in shower cubicles, bathrooms and toilets. For larger shower rooms and longer ducts choose **BriteX Turbo** which comes complete with 6 meters of flexible ducting. For bathrooms without windows versions with an adjustable timer overrun are available, adjustable from 1-20 minutes. The fan is typically connected to the bathroom lighting, and it continues to run after the light has been switched off.

The motor housing is made from ABS and has a detachable mounting foot. All **BriteX** systems can be installed in zone 1 in accordance with IEE Regulations 16th Edition. All versions are IPX4 rated and suitable for use with a supply voltage of 220-240V 50Hz. The fan motor is sealed for life maintenance free and is fitted with safety thermal overload protection.

BriteX Turbo Range

Installation

BriteX units can be installed with the inlet located in Zone 1 of a bath or shower in accordance with IEE regulations. The inlet bezel/light assembly fits flush to the ceiling. The fan is installed at the highest point in the duct run using the bracket provided to avoid a possible build up of condensation in the duct. It is good practice to cut off any surplus duct. Extended duct and radiused bends improve performance. The grille provided can be installed in the soffit of the roof or in a gable end wall.

BriteX LoVolt Installation

Hole diameter: 102mm
Ducting size: 100mm

BriteX Turbo Installation

Hole diameter: 102mm
Ducting size: 100mm

Xpelair Profile 29 & Profile 25M

Flat duct systems

Key features

Type:	Low profile flat plastic & metal ducting
Application:	Particularly suitable for use with Premier DX180, DX200/400 & CF20/40 models.
Size options:	29mm plastic & 25mm metal
Installation:	Simple push fit & easily concealed

The Range

The ideal ducting solution for a variety of domestic installations where ceiling or wall space is limited.

In many refurbishment projects walls or ceilings are battened to provide a narrow space for services such as plumbing electrical wiring and ventilation. Where space is limited **Profile** duct is ideal above kitchen wall units, in cavity walls and even under floors.

Xpelair **Profile 29** is an easy to assemble, push fit, modular ventilation duct system designed for flush mounted fan installation within a minimum gap of 50mm ceiling void. It is lightweight and easy to cut to length using a cross-cut saw. **Profile 29** systems are non reverberant and will not deteriorate in applications where high humidity is present.

The system includes a full range of vertical and horizontal bends including special adaptors for connection to the top and rear of Premier DX200 & CF20 centrifugal fans. The extensive range of accessories offers the flexibility to achieve almost any ducting configuration in particularly tight spaces.

Assembly is easy using push fit flat channel connectors and the system is held to the wall or ceiling using quick-fit support clips. The ducting can be terminated in a conventional wall grille or a choice of horizontal or soldier course airbricks, and is then simply concealed behind plasterboard.

Some applications call for traditional galvanised sheet steel ducting. For these applications **Profile 25M** metal flat ducting can be used. **Profile 25M** measures 230 x 25mm and is also available in an extensive range of interconnecting components. With a depth of only 25mm it is ideal for installation between the floor/ceiling slab and the plasterboard finish. It can be fixed to the ceiling/wall by suitable fixings through the continuous flange on either side. All joints should be sealed with a sealing compound.

Profile 60 flat plastic duct system is also available for installations where a particularly low profile duct is not required, or where longer duct runs are required.

Profile 29 Flat Plastic Ducting - 234 x 29mm

Product	Product Ref	Description	Dimensions	Ref. No.
	XFD	Flat channel duct 1m	234 x 29	91104AA
		Flat channel duct 1.5m	234 x 29	91105AA
		Flat channel duct 2m	234 x 29	91106AA
	XFC	Flat channel connector	234 x 29	91107AA
	XFH90	Horizontal 90° bend	234 x 29	91108AA
	XFH45	Horizontal 45° bend	234 x 29	91109AA
	XFV90	Vertical 90° bend	234 x 29	91110AA
	XFV45	Vertical 45° bend	234 x 29	91111AA
	XFEP	Elbow bend/plenum 100mm spigot	234 x 29	91112AA
	XFRRRA	Round to rectangular adaptor 100mm spigot	234 x 29	91113AA
	XFS	Universal support clip		91114AA
	FDA	Flat ducting adaptor kit		90547AA
	XFLAA	Long airbrick adaptor	234 x 65	91102AA
	XFAF	Airbrick fascia terracotta	205 x 62	91103AA
		Airbrick fascia white	205 x 62	91126AA
		Airbrick fascia brown	205 x 62	91127AA
		Airbrick fascia cotswold stone	205 x 62	91128AA
	XFAS	Airbrick soldier course		91246AA
	XFWT	100mm telescopic wall tube		91247AA

Typical Specifications on page 128.

Profile 25M

Xpelair XIM

Domestic inline mixed flow extract fans

Key features

Type:	Inline one or two speed mixed flow extract fans
Application:	Domestic bathrooms, shower rooms kitchens
Control options:	Standard or timer
Legislation:	Conforms to Building Regulations

The Range

Traditionally centrifugal ducted systems have been bulky and noisy. Well not any more. The new low profile Xpelair **XIM** units provide plenty of useable power for domestic ducted applications and save on space too. The seven models in the range are ideal for ducted applications where space is limited, such as in bathrooms, shower rooms, kitchens and other internal rooms without opening windows.

Available in four sizes, the new Xpelair **XIM** range of plastic mixed flow units offers duties for a wide range of ducted applications. They are dimensionally smaller than centrifugal units and with lower sound levels these units can often eliminate the need for a silencer. The two T models have a timer overrun adjustable from 3 to 15 minutes. Larger units have two speeds.

All models come complete with a convenient mounting cradle which makes installation or subsequent inspection simple. The terminal box is easily accessible simplifying the electrical connection. **XIM** units are either IPX2 or IPX4. Those rated IPX4 can be used in wet room ducted applications. Their plastic construction will not deteriorate in high humidity conditions. They are double insulated and suitable for operation on a supply voltage 220 - 240V 50Hz. All motors are maintenance free with greased for life bearings, and have safety overload protection.

Models

XIM100

Ref. 91252AW

- Single speed inline fan
- Mixed flow impeller/guide vanes
- Integral mounting cradle
- Rated at IPX2

XIM100T

Ref. 91253AW

- Single speed inline fan with adjustable overrun timer from 3-15mins
- Timer located in the terminal box
- Triggered by lighting circuit
- Mixed flow impeller/ guide vanes
- Integral mounting cradle
- Rated at IPX2

XIM100+

Ref. 91254AW

- High performance 2 speed inline fan
- Mixed flow impeller/guide vanes
- Integral mounting cradle
- Rated at IPX4

XIM125

Ref. 91255AW

- 2 speed inline fan
- Mixed flow impeller/guide vanes
- Integral mounting cradle
- Rated at IPX4

XIM150

Ref. 91256AW

- 2 speed inline fan
- Mixed flow impeller/guide vanes
- Plastic construction
- Integral mounting cradle
- Rated at IPX4

XIM150T

Ref. 91257AW

- Adjustable overrun timer from 3-15mins
- 2 speed inline fan
- Timer located in the terminal box
- Timer triggered by lighting circuit
- Mixed flow impeller/guide vanes
- Integral mounting cradle
- Rated as IPX4

XIM200

Ref. 91258AW

- 2 speed inline fan
- Mixed flow impeller/guide vanes
- Integral mounting cradle
- Rated as IPX4

Performance

Controllers

Change Over Switch COS

Ref. 90108AW

- Provides High-Low speed operation
- Surface or recess mounting
- 85 x 85mm
