81.312.020	FalcoRondo starter section door canopy with clear polycarbonate roof, width 2,100 mm, depth 1,200 mm
81.312.700	additional charge for powder-coating steel structure in RAL

**FALCORONDO DOOR CANOPY**

A cantilevered door canopy made up of two supports fastened to the wall with roof panels in either polycarbonate or acrylic. The side beams also act as the gutter, and are equipped with rainwater spouts.

All steel parts are hot-dip galvanised. For a small sum, you can have the steel parts powder-coated in a standard RAL colour. Supplied as standard without mountings.

The nature of the wall is very important to ensure the correct choice. DIY mounting is perfectly feasible with a certain amount of technical expertise.

**N.B.** Other dimensions, add-on canopies and collection gutters are available on request.

From a depth of 1,500 mm you need a tie rod.
