

Business with an attitude

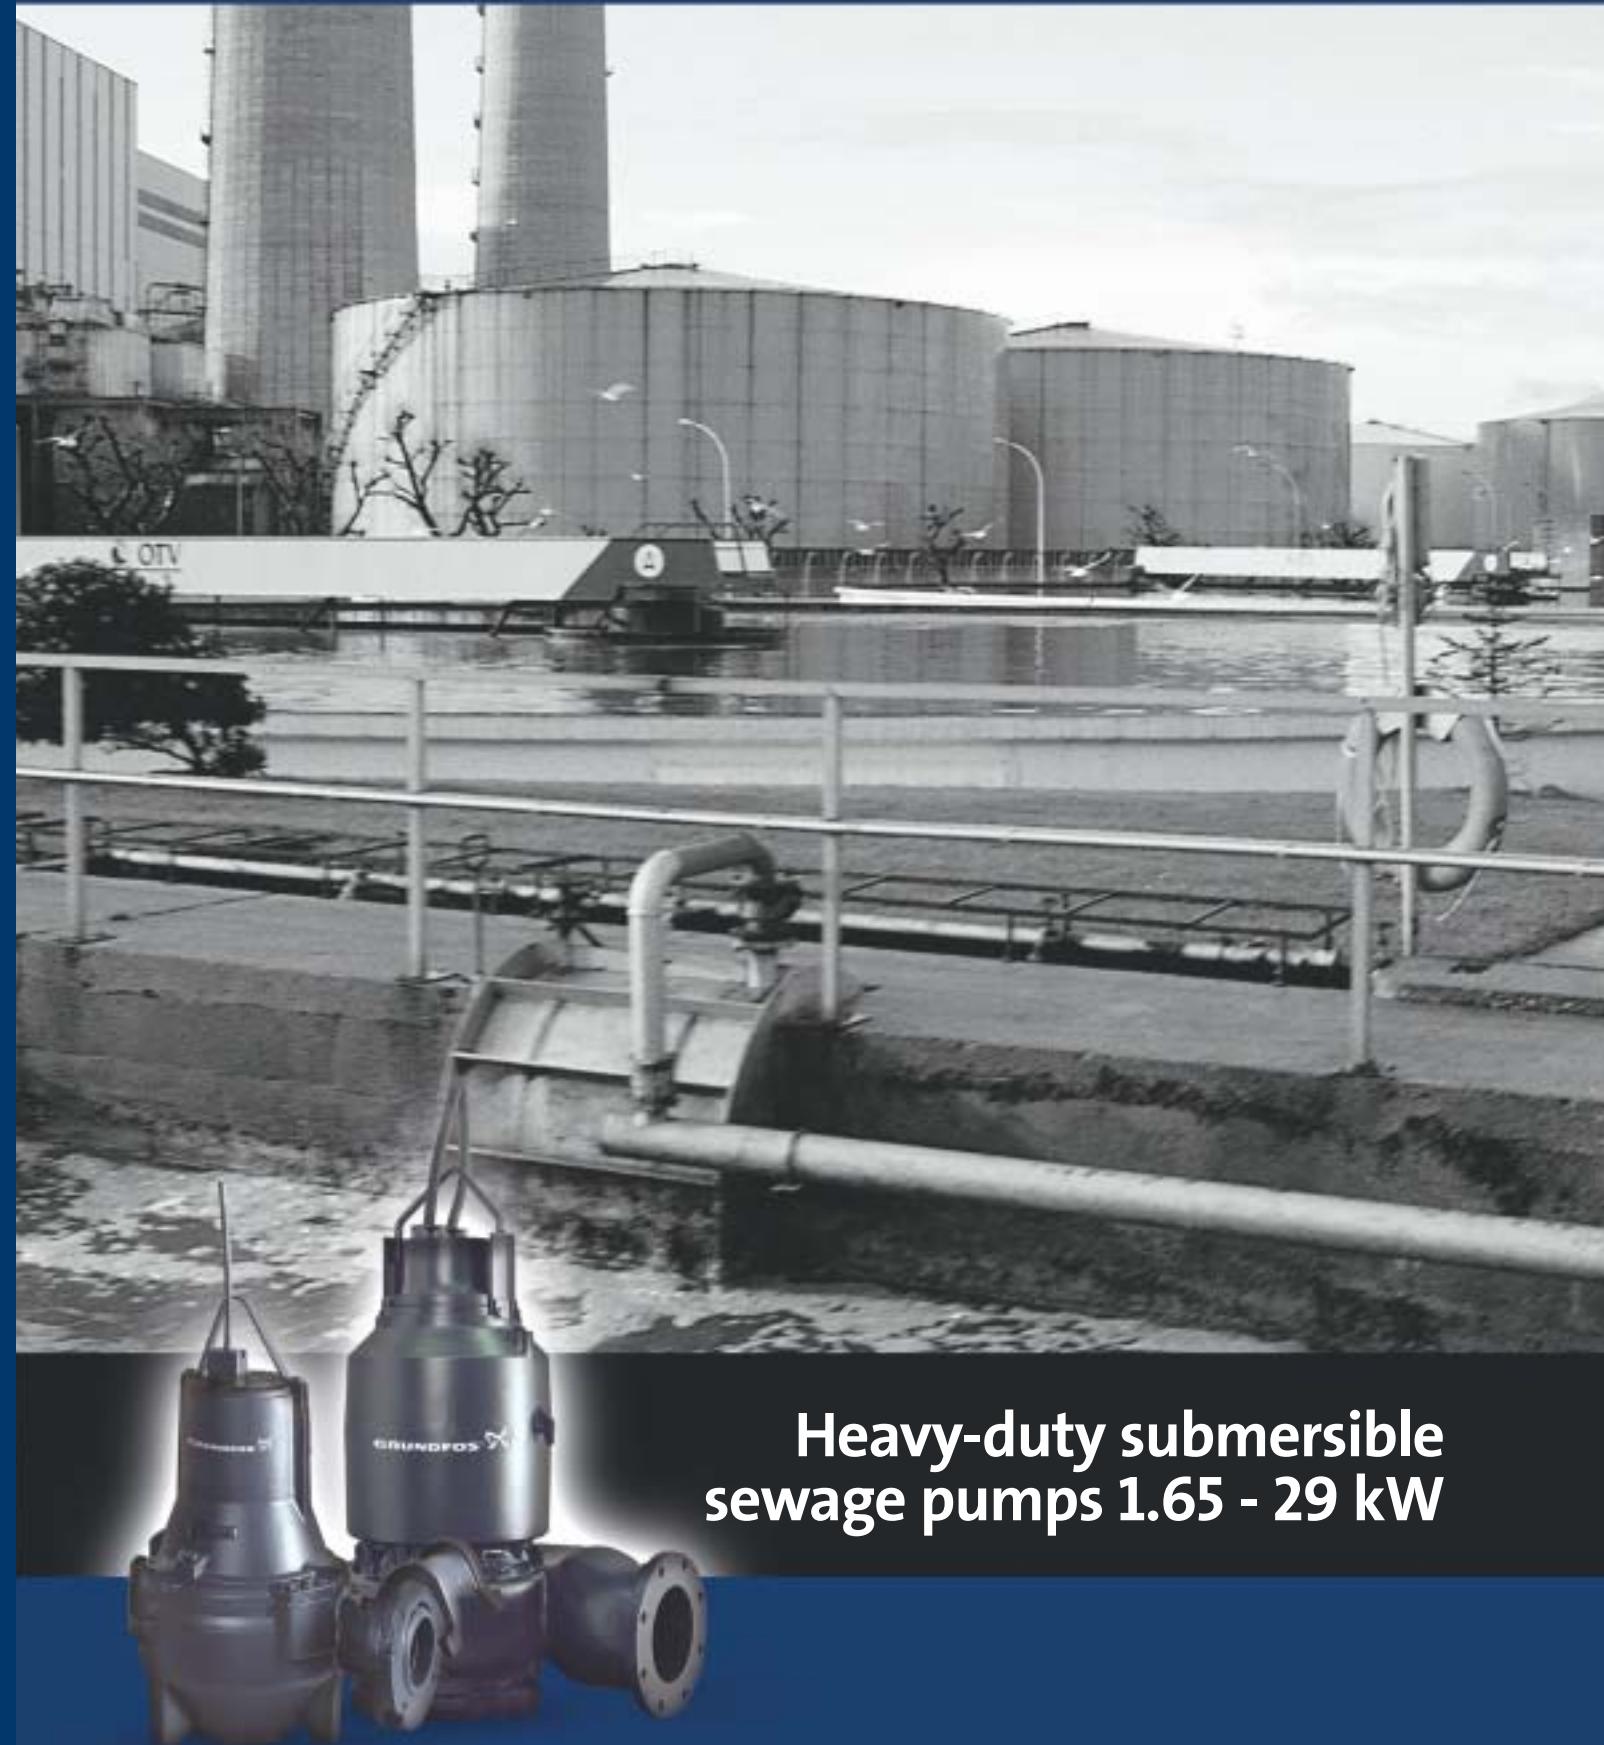

Knowledge The sharing of knowledge, experience and expertise across our global network will always lead our business forward.

Innovation Combining the best technology with fresh ways of thinking, we will continue to develop even better pumps, systems, services and standards.

Solution With a complete product range, capable of providing every conceivable water solution, we are the most complete player on the market.

**Heavy-duty submersible
sewage pumps 1.65 - 29 kW**

Powerful pumps for handling unscreened raw sewage

Grundfos offers a full range of extremely dependable, powerful sewage pumps, designed for handling unscreened raw sewage. We have more than forty years' experience in providing specialised pumps and pumping equipment for handling all kinds of wastewater and sewage. Our long experience has taught us what our customers demand from a sewage pump:

Powerful advantages

► Higher pump efficiency over time

State-of-the-art technology makes the Grundfos pumps extremely efficient and highly dependable. Innovative features such as the unique SmartTrim adjustment of impeller clearance provide low Cost of Ownership.

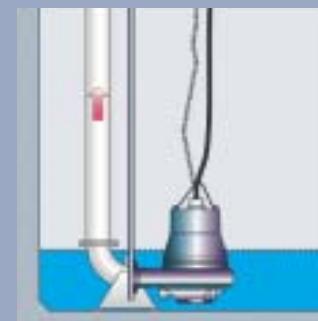

► Less downtime

The inherent non-clogging design of our Super-Vortex-impeller pumps and the excellent solids handling capability of our channel-impeller pumps guarantee maximum operating time and substantial reductions in maintenance costs caused by pump jamming or clogging.

► Lifelong reliability

The sturdy sewage pumps are designed for continuous pumping under the most difficult operating conditions. The well-proven design is based on our long experience in the wastewater business.

At Grundfos we maintain a close dialogue with our customers to constantly improve pump design and performance. Only this way can we build the long-lasting partnerships on which our business is founded.

Submerged installation on auto-coupling, types 1 and 2

Submerged installation on auto-coupling system requires a base plate with a 90° bend, fixed to the bottom of the pit. When lowered into the pit along the guide rails, the pump automatically connects to the base plate. The flexible neoprene SmartSeal ensures a leak-proof connection between the pump and the auto-coupling.

Type 1:

To prevent sedimentation of sludge in connection with intermittent operation, we recommend a stop level corresponding to the top of the pump housing. For sufficient cooling in connection with continuous operation, the liquid level must always be above the middle of the motor.

Type 2:

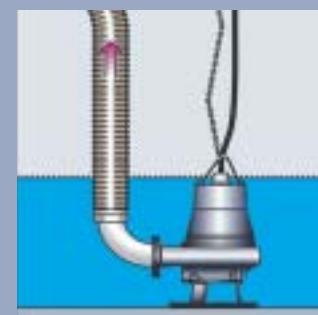

Motor cooling is independent of the pumped liquid level, thanks to separate motor cooling.

Vertical dry installation, type 3

The Grundfos sewage pumps can be installed either vertically or horizontally to suit specific application arrangements. All pumps are 100% watertight, allowing for dry installation with the workspace around the pump remaining clean and dry. The pumps are fully flood-proof if an unexpected flooding should occur.

Motor cooling takes place either by transferring excess heat from the motor to the pumped liquid, or by means of a cooling jacket.

Submerged installation, portable, types 4 and 5

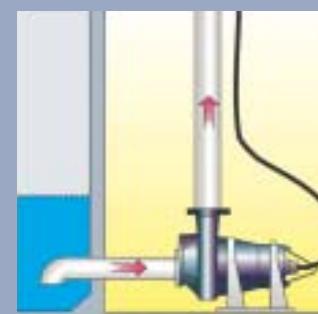

Certain applications, such as construction sites, require portable submersibles. Where a portable submersible is required, hoses of varying lengths and materials can be supplied.

Type 4:

To prevent sedimentation of sludge in connection with intermittent operation, we recommend a stop level corresponding to the top of the pump housing. For sufficient cooling in connection with continuous operation, the liquid level must always be above the middle of the motor.

Type 5:

Motor cooling is independent of the pumped liquid level, thanks to separate motor cooling.

Horizontal dry installation, type 6

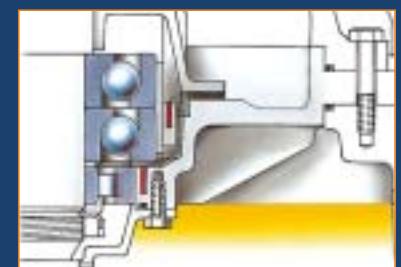

Horizontal dry installation improves the overall efficiency of the system as unnecessary components and bends are avoided. The feasibility of horizontal dry installation depends on the floor space available as the system takes up slightly more space than a vertically installed pump.

Motor cooling takes place either by transferring excess heat from the motor to the pumped liquid, or by means of a cooling jacket.

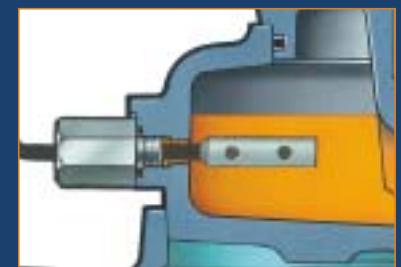

The Grundfos submersible sewage pumps are designed to reduce energy consumption and to keep downtime costs at a minimum. Maintaining peak efficiency throughout the entire lifetime of the system is a key issue:

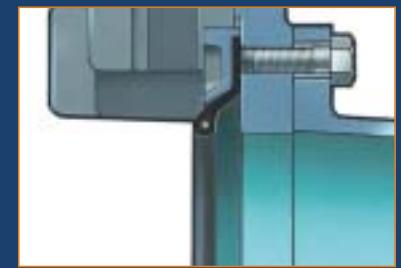

Watertight encapsulated motor, insulation class F (155°C), enclosure class IP 68, with three thermal sensors in the stator windings.

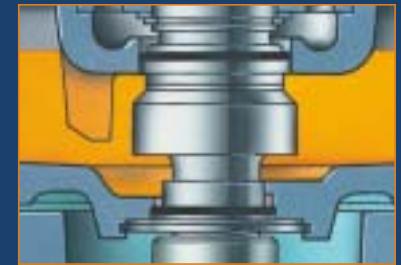

Heavy-duty maintenance-free greased-for-life ball bearings.

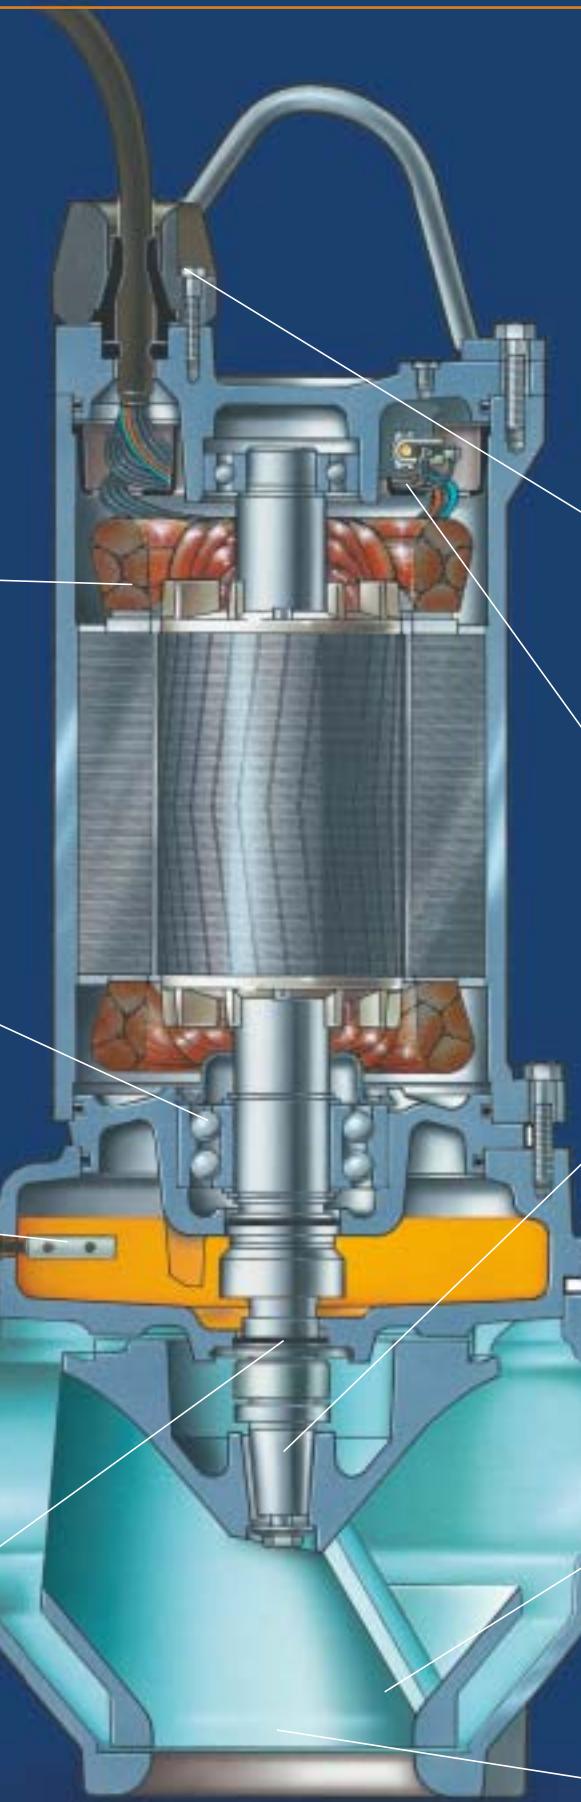

Seal condition monitoring. A monitoring probe in the oil housing gives early warning of seal leakage (optional, from range 50).

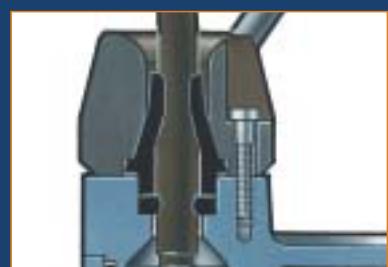

The Grundfos SmartSeal gasket system provides a completely leak-proof connection.

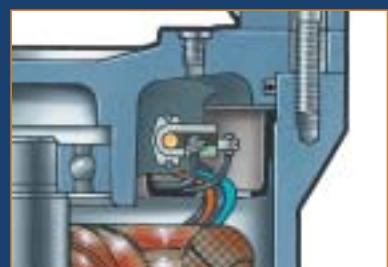

Double mechanical shaft seal system in intermediate oil chamber for reliable sealing between the pumped liquid and the motor. Primary seal with SiC/SiC rings, and SiC/carbon rings in the secondary seal.

Watertight cable entry of corrosion-resistant polyamide, with soft shapes to prevent damage to the power cable.

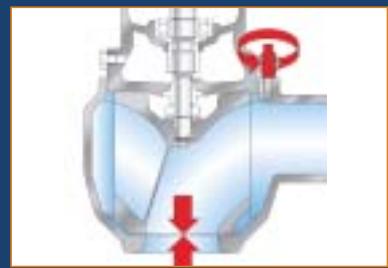

Moisture detector continuously monitors the motor enclosure, and automatically cuts off the power in the event of leakage.

Stainless steel pump shaft with dynamically balanced rotor and conical shaft end for securing of impeller.

SmartTrim system allows easy adjustment of factory-set impeller clearance maintaining maximum pump efficiency.

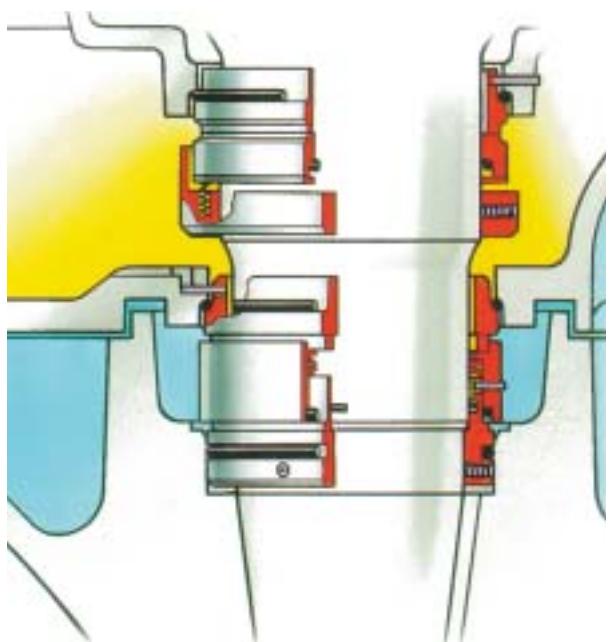

Self-cleaning channel impeller with long vanes that reduce risk of jamming or clogging, or unique Super-Vortex impeller with high pumping efficiency and less downtime.

47 metres of backflow with no non-return valves

In the Pihlajanmaki pumping station in Finland, water is being lifted 47 metres. The Grundfos pumps in this installation have no non-return valves. Consequently, when the pumps are stopped, the entire water column flows back to the pit through the pumps. With this arrangement the liquid in the pit is stirred up and mixed to prevent sedimentation problems.

Automatic flushing of wet pits

The shaft seals of Grundfos pumps are capable of rotating in either direction. When pumps are installed with separate pipework, sludge sedimentation can be effectively avoided by back flushing the system at regular intervals.

Extended pump life

Trouble-free shaft seal operation is ensured by springs located inside the oil chamber. The springs are completely isolated from the pumped liquid. Automatic removal of air and grit from the seal area, in combination with silicon carbide primary seal faces is the best guarantee for trouble-free operation and extended pump life.

Reduced dry pit installation costs

In pumping stations with separate pipework for each pump, costly non-return valves can be avoided.

In dry applications – or in submerged installations at low water level – efficient cooling of the motor is essential. This is achieved either through a cooling jacket encasing the stator housing or by means of built-in heat conduits transporting the heat away from the motor.

Cooling jacket

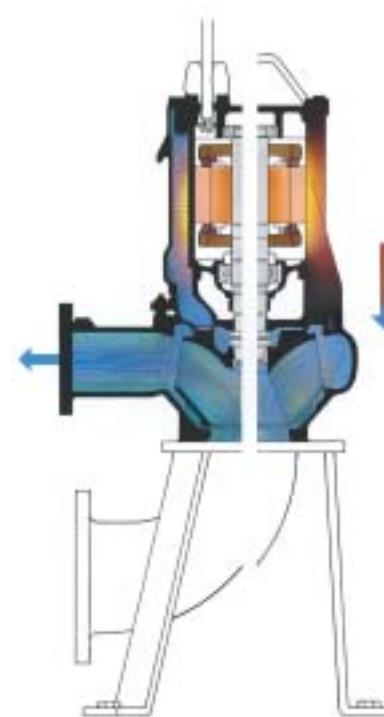

Some of the pumped liquid is led into the cooling jacket via a clearance behind the impeller. An integrated screening system prevents solids from entering the cooling jacket. By circulating the liquid around the motor, excess heat is transferred to the pumped liquid and led away.

Applicable for Grundfos pump ranges 50, 54 and 58.

Stator housing conduits

Cooling of the motor takes place by transferring excess heat via the stator housing to the pumped liquid.

Applicable for Grundfos pump ranges 34, 42 and 46.

Operating conditions and maximum starting frequency

Pump application is restricted by the following limits:

- Maximum ambient temperature and pumped liquid temperature: +40°C
- Storage temperature range: -30°C to +60°C
- Maximum submergence: 20 m
- Voltage tolerance: -10% to +10%

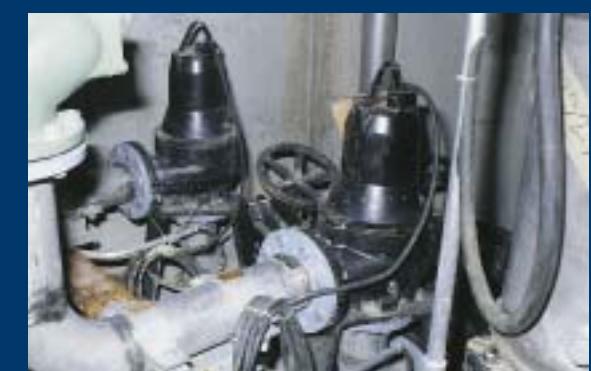

Pump range 42 and 46: -15% to +5%

Pump starting frequency should not exceed the recommendations indicated below. For shorter periods of time a starting frequency of up to double the recommended is permissible.

Range	Starts per hour
34, 42	25
46, 50, 54	20
58	15

Horizontally installed pumps with cooling jacket

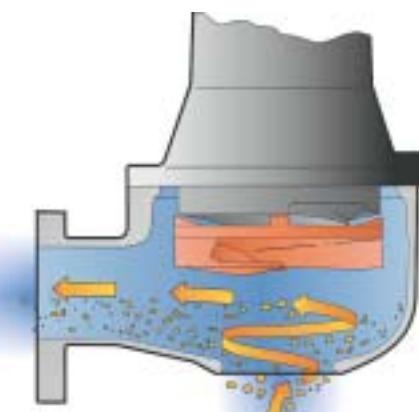

Vertically installed pumps, with stator housing conduit cooling.

Grundfos SuperVortex impellers

A unique impeller design

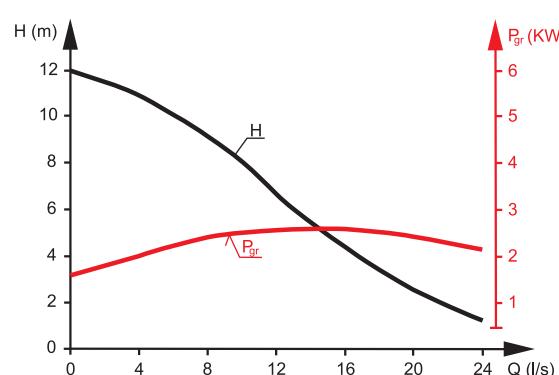

The unique design of the Grundfos SuperVortex impellers provides high pumping efficiency and less downtime. With a flow range from 4 l/s, the Grundfos SuperVortex-impeller pumps are the optimum solution for all small pumping stations.

No clogging or jamming

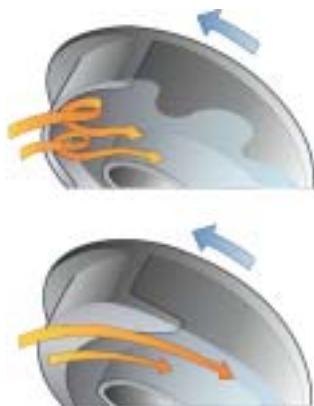

In a SuperVortex-impeller pump, the flow is entirely outside the impeller. The design of the impeller ensures that long fibres, rags, etc. pass freely through the pumps without getting caught and without causing clogging or jamming. This means less downtime and, consequently, reduced service costs and higher pumping efficiency.

The design of the SuperVortex-impeller pumps also prevents the common problem of jamming between wear rings. A Grundfos SuperVortex-impeller pump needs no wear rings!

Full performance curve without operating limitations and vibrations

Due to the special power characteristics of the Grundfos SuperVortex-impeller pumps, it is possible to run the pumps right up to the maximum flow on the curves without any risk of overloading the motor. The steep performance curve means minimal flow fluctuation with varying heads.

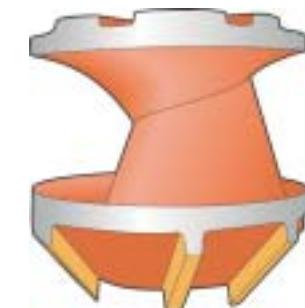

Conventional vortex impeller

In pumps fitted with a conventional vortex impeller, turbulent disturbance is liable to form around the impeller. This will disrupt the flow pattern and result in lower pumping efficiency and reduced head.

Grundfos SuperVortex impeller

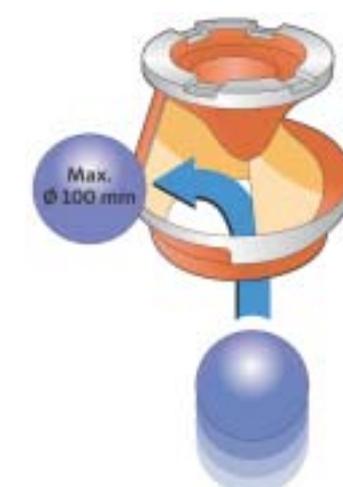

The liquid passes freely outside the impeller without any turbulent disturbance.

Grundfos channel impellers

Efficient non-clogging

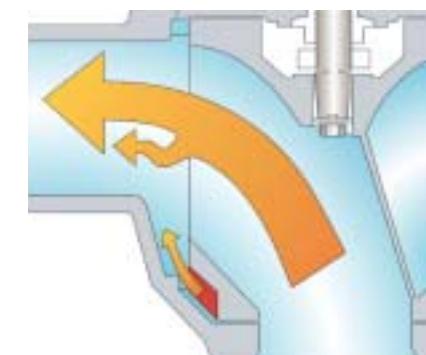

The Grundfos channel-impeller pumps provide high efficiency and excellent non-clogging capabilities. The channel impellers are designed with a large free passage Ø 80 mm or 100 mm, depending on model and long impeller vanes. Channel-impeller pumps are ideal for heavy-duty operation in large-scale pumping stations.

Large free passage for superior solids handling

Compromising on the ability to handle solids in order to obtain higher pumping efficiency substantially increases the risk of clogging. More clogging means more downtime and increased operating costs.

The Grundfos channel-impeller pumps are capable of handling solids of up to 80 mm or 100 mm size. The full free passage, however, is much larger. The result is less clogging and less downtime.

Self-cleaning impeller

On Grundfos wastewater pumps smaller than 12 kW, the bottom part of the channel impellers feature specially designed auxiliary vanes. These vanes are designed to create a powerful flow that keeps the clearance between the impeller and the pump housing free from solids or fibres.

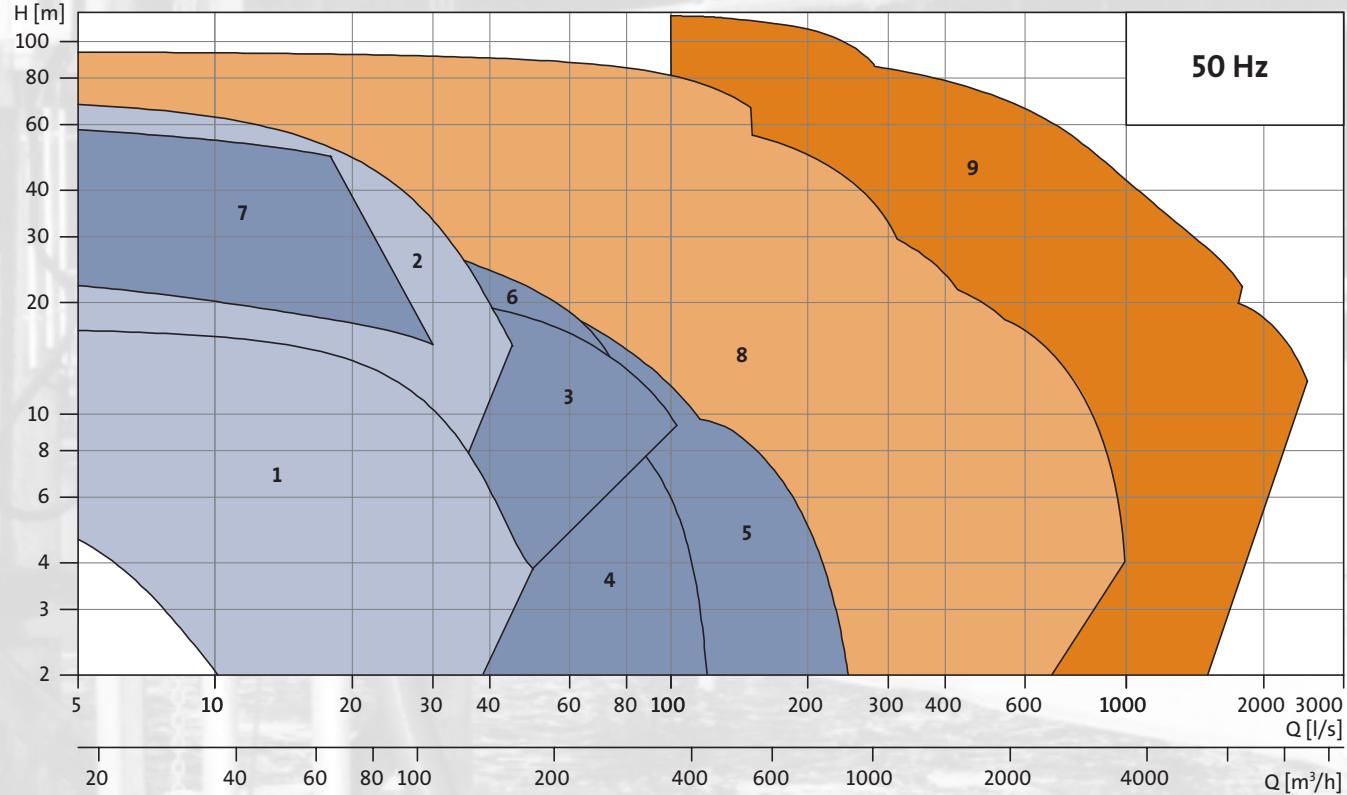

Semi-axial impeller design with long vane

The length of an impeller vane is a key factor in determining the length of fibres that can pass through a pump without getting caught. The Grundfos channel impellers are of a semi-axial design with extra long vanes. This provides maximum performance and eliminates problems with fibres or rags getting caught in the impeller.

Performance overview and type key

SuperVortex-impeller pumps

Performance overview – Grundfos range of submersible sewage pumps

Area	Description
1	SuperVortex impeller, low head ranges 34, 42, 46
2	SuperVortex impeller, high head ranges 42, 50, 54, 58
3	Channel impeller, medium head ranges 42, 46, 50, 54
4	Channel impeller, low head ranges 46, 50
5	Channel impeller, low head range 54
6	Channel impeller, high head ranges 46, 50, 54
7	Channel impeller, super-high head ranges 46, 50, 54
8	Channel-impeller pumps, 15 kW to 155 kW*
9	Channel-impeller pumps, 160 to 520 kW*

Pump range, modular concept

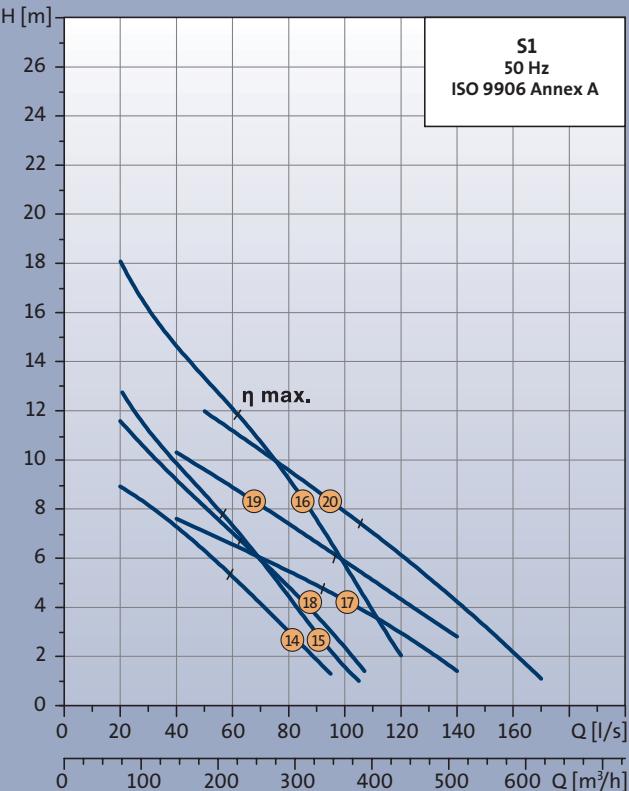

Grundfos sewage pumps are of modular design. This means that pumps belonging to the same model range share many common spare parts. This allows for interchangeability of impellers and hydraulics.

Channel-impeller pumps

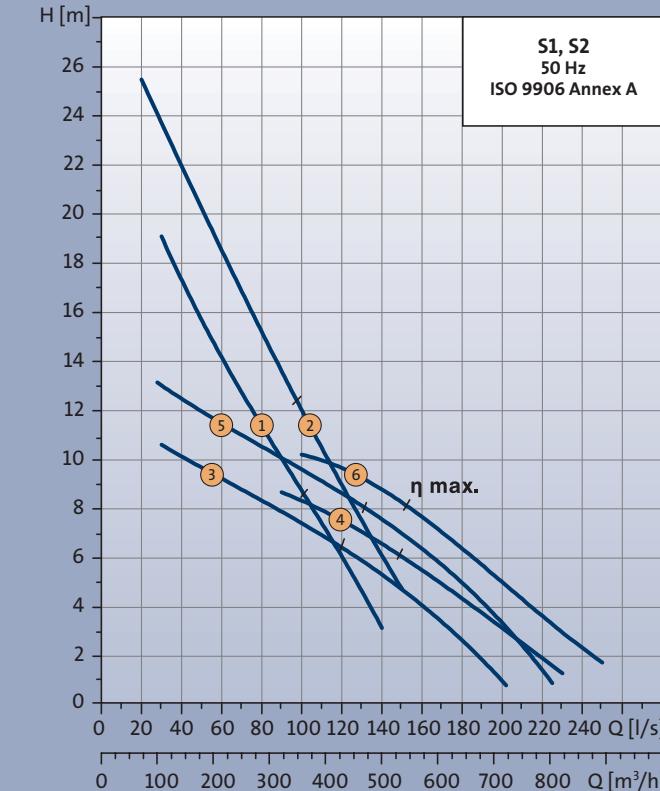

Medium head – ranges 42, 46, 50, 54

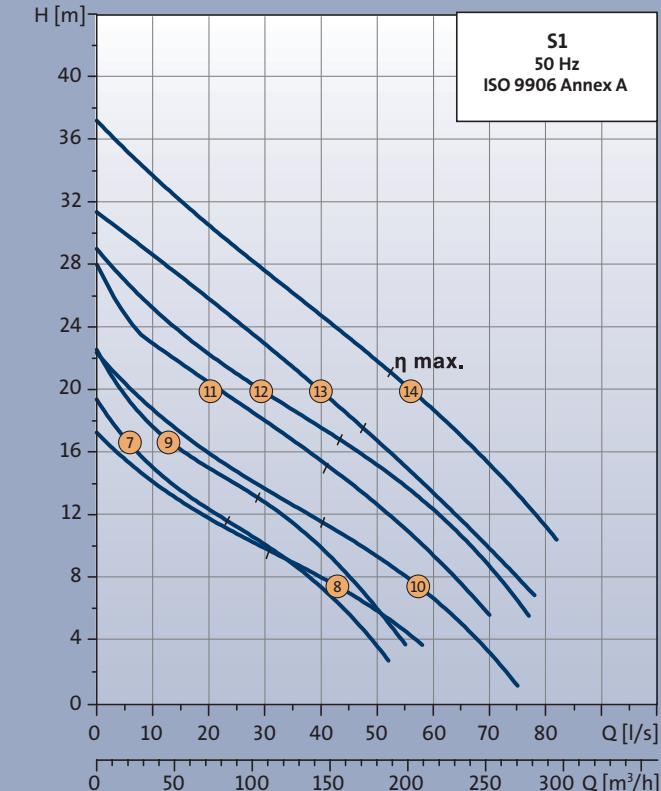

Low head – ranges 46, 50

Low head – range 54

High head – ranges 46, 50, 54

Level switches and controllers

Level switch	Description		Product number
	Level switch with 10 m cable		96 00 33 32
	Level switch with 20 m cable		96 00 36 95
	Level switch for potentially explosive applications with 10 m cable		96 00 34 21
	Level switch for potentially explosive applications with 20 m cable		96 00 35 36
	Bracket for two level switches		96 00 33 38
	Standard level switch with 10 m cable and bracket	1 pump without alarm (2 switches) 1 pump with alarm (3 switches) 2 pumps without alarm (3 switches) 2 pumps with alarm (4 switches)	62 50 00 13 62 50 00 14 62 50 00 14 62 50 00 15
	Level switches for potentially explosive areas with 10 m cable and bracket	1 pump without alarm (2 switches) 1 pump with alarm (3 switches) 2 pumps without alarm (3 switches) 2 pumps with alarm (4 switches)	62 50 00 16 62 50 00 17 62 50 00 17 62 50 00 18

In addition to the chemical and thermal properties of the water-proof polypropylene housing as well as the polyurethane cable, the level switches are resistant to alcohol, uric acid, sewage, oils, fats, petrol, fruit acid, as well as a range of other chemicals.

Level controller	Description	Operating current per pump [A]	Mains switch required [A]	Product number			
				Standard controller	Including hour counter	Including start counter	Including combined hour and start counter
LC 107 controller, pneumatic version with level bells and tube for 1 pump 3 x 400 V, direct-on-line starting.	1.0 - 2.9	25	96 00 24 67				
	1.6 - 5.0	25	96 00 24 68				
	3.7 - 12.0	25	96 00 24 69				
	12.0 - 23.0	40	96 00 24 70				
LCD 107 controller, pneumatic version with level bells and tube for 2 pumps 3 x 400 V, direct-on-line starting.	1.0 - 2.9	25	96 00 24 74				
	1.6 - 5.0	25	96 00 24 75

The Grundfos wastewater range

1

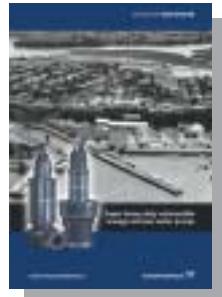

Submersible sewage grinder pumps

Brochure covers the new Grundfos range of sewage grinder pumps (SEG) for pumping of wastewater with toilet discharge.

Super heavy-duty submersible sewage and raw water pumps

Brochure covers the Grundfos range of super-heavy-duty channel-impeller pumps, axial-flow pumps, and propeller pumps from 2.8 kW up to 520 kW.

2

Heavy-duty submersible sewage pumps 15 - 155 kW

Brochure covers the Grundfos range of sewage pumps from 15 kW up to 155 kW for handling of raw sewage in heavy-duty applications.

3

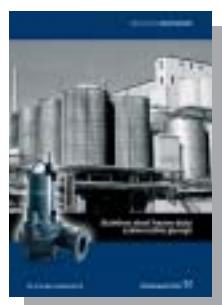

Lifting stations

Brochure covers Grundfos lifting stations for individual as well as multi-user applications.

Stainless steel heavy-duty submersible pumps

Brochure covers the Grundfos range of heavy-duty stainless steel pumps (SEN) for aggressive and corrosive environments.

4

Mixers and flowmakers

Brochure covers the new range of mixers and flowmakers for optimal control of liquids and solids throughout the wastewater treatment process.

5
