

EntraSec™ Sliding Gates

Modern gateways with perfect security

Gunnebo dedicates all of its expertise to development, production and service. All its products are therefore state-of-the-art and are tailored precisely to customers' needs. Detailed research into the market guides us towards innovations. This was the route taken when developing EntraSec™. The market is receptive to attractive, modern sliding gates and we build them. EntraSec's™ profiled contours allows it to blend harmoniously into modern environments with powerful architectures. Attractive stainless steel look, silver-coloured eloxal coating and various RAL-based powder coatings extend the design possibilities available. On request your new EntraSec™ sliding gates can have any surface you desire.

You will be impressed by the gate's smooth running as well as by its attractive design. The weight-saving design doesn't just boast unequalled stability – the gates can be easily opened to 10m – the gates are opened and closed in a gentler and more even manner than that achieved by the design used to date. It goes without saying that the gates' security standard matches that of all Gunnebo products. Fitting is very simple, as you would expect from Gunnebo. The gates are prefabricated in our factory and are then subjected to basic functionality tests. Such a simplified procedure brings other benefits too. The good price/performance ratio is just as convincing as the innovative technology and attractive design.

EntraSec™ Sliding Gates

Modern gateways with perfect security

The modern design for cantilevered sliding gate systems used by the EntraSec™ models has a lot to offer.

Benefits

- The patented design of the gate leaf results in perfect, permanently static and dynamic shape stability
- The computer-optimised precision section for the bottom spar with two blocks of double rollers mounted axially and radially enables the gate leaf to move with extremely low levels of friction and wear, resulting in an exceptional long service life
- EntraSec™ is fitted with tried and tested drive technology and is a state-of-the-art development
- Its verified strict safety standard corresponds to the European EN 12453 standard
- Operational reliability is optimum. The design satisfies the European EN 13241-1 standard
- The maximum spacing between bars is 100mm. This figure is well below the permissible spacing (max. 120mm, according to EN 349) for vertical bars
- The materials and surfaces used produce an appearance which remains attractive for a long time
- Our know-how allows us to use an exclusive stainless steel look as well as a wide range of colours both for infill and frame areas
- Safety edges and rollers integrated in the gate leaf blend harmoniously into the overall picture
- EntraSec™ can be easily combined with all our company's site protection systems
- Quick and rational on-site installation is possible since the gate is fully assembled and its functions are tested in the factory
- The daily number of cycles and usage periods are virtually unlimited if the service life is defined in advance.
- If the EntraSec™ gate is damaged as a result of an accident, Gunnebo can replace the damaged part at low-cost

“Everything from one source”

“Everything from one source” is our principle. Planning, manufacturing, installation and maintenance is our competence. Gunnebo stands at your side as a strong and experienced partner.

Features

- Attractive design
- Smooth, silent and fast operation
- Very good stability, even with large opening widths
- Time-saving installation thanks to high level of pre-fabrication
- Function guaranteed in the long-term and easy to maintain
