FVP 25 Portable Heavy Duty High Performance Industrial Vacuum Loader

<http://www.ibsblowers.com>

Fully portable by forklift and therefore suitable for material collection anywhere on site in all industrial and commercial applications, IBS offer the **FVP 25** Portable Heavy Duty High Performance Industrial Vacuum Loader **designed for one-man operation.**

The unit is able to collect a range of materials including fine particles through to **aggregates up to 40 mm** in size. **Loading rates vary between 3 and 6 tons per hour over 40 metres** depending on the material (or further if utilised with a sealed interceptor skip or fixed pipework system).

Units are available for short or long term hire, contract hire or lease at very competitive rates. Trial/demonstration machines available.

Industrial Blower Services Ltd.,
Unit 6 River Brent Business Park, Trummers Way, Hanwell, London W7 2QA.

The FVP 25 has been designed for :

Versatility

- Unlike our competitors units the FVP25 is suitable for wet and dry materials and sludges and when configured with our hopper provides a portable bagging unit or dual purpose combined unit
- Super flexible hose and vacuum tools are all available

High performance

- Excellent conveying rates, the 18.5 Kw motor exceeds all competitors ratings
- Utilises an energy saving electric motor on soft start (running on a 32A motor rated power supply) and a high quality tri-lobe positive displacement vacuum pump
- Quiet operation
- Excellent filtration

Build quality and reliability

- Very robust, exceeds that of the competition whilst remaining very cost effective
- Low running and maintenance costs

Adaptability

- The FVP25 can be used to power a centralised vacuum system and collect material in its integral 1 cubic metre tipping skip.

With the addition of a sealed intercept hopper it can directly return collected material for re-processing or discharge into Bulk Bags.

- Conveying distances can be increased by utilising a 1 cubic metre fork lift sealed intercept skip/hopper for both portable or centralised applications. Hoppers are available up to 3 cubic metres capacity and larger intercept skips are also available.
