

Profile-Line® Tile Vent

KLOBER

A range of in-line ventilating tiles suitable for the 4 most popular concrete interlocking roof tiles.

Installation

Determine the location of the position of the Tile Vent on the underlay and cut open the underlay using a star cut the size of the downpipe. After folding back the underlay tabs insert the Vent in through the underlay and fix to the batten, making sure the fixing lug is under the adjacent roof tile. Then proceed with the tiling in the normal manner.

Regulations and certifications

Complies fully with relevant Building Regulations and British Standards

Performance

Provides 10,000 mm² effective ventilation area

Vent spacing	5,000 mm ² /m	install at 2.0 m centres	
	10,000 mm ² /m	install at 1.0 m centres	
	25,000 mm ² /m	install at 0.4 m centres	
Air flow resistance	Flat Vent/D Roman	Double Pantile	15 x 9 Vent
15 litres/sec	7 Pascals	4 Pascals	12 Pascals
30 litres/sec	29 Pascals	16 Pascals	48 Pascals
60 litres/sec	115 Pascals	64 Pascals	192 Pascals

Related products

When used as high-level ventilation, use in conjunction with Klobber Eaves Ventilation products.

Product features & benefits

- In-line design
- 4 profiles
- Choice of four colours
- Fully wind tunnel tested
- Built in downpipe allows direct ventilation to roof space
- Adaptor available for soil ventilation or mechanical extraction
- Robust construction

Area of application

Suitable for:

- High and low level ventilation
- Mechanical extraction when used with the soil/mechanical adaptor
- Roof pitches over 17.5° (Double Roman & Double Pantile) & 20° (15 x 9 & Flat Vent)

Material

UPVC

Polypropylene (15 x 9 only)

Colours

Antique red
Brown
Grey
Terracotta

Dimensions

15 x 9	384 x 229mm
Double Roman/Flat	418 x 330mm
Double Pantile	418 x 332mm

Weight (per carton)

15 x 9 Vent	5.5kg
Double Pantile	12.3kg
Double Roman	12.2kg
Flexipipe	12.9kg

Packaging

10 vents per carton
12 cartons per pallet
18 cartons per pallet (15 x 9 Vent only)
