

Concrete Bollards

Spherical 700 Bollard

Spherical 500 Bollard in blue and Spherical 700 Bollard in blue with leaf pattern

Concrete bollards provide effective security and perimeter protection, whilst also being incredibly durable and cost effective.

Our comprehensive range of concrete bollards contains numerous designs and finishes encompassing the purely utilitarian and those with contemporary styling, providing real choice in precincts, trafficked routes, residential and urban areas.

All bollards are manufactured from high quality aggregates and are fully reinforced.

Quality control cubes are tested in accordance with EN 12390-3:2001 at seven and 28 days to a minimum strength requirement of 30N/mm² at 28 days.

Colours and Finishes

Bollards are available in a wide variety of colours, including mixes manufactured to coordinate with Marshalls concrete paving.

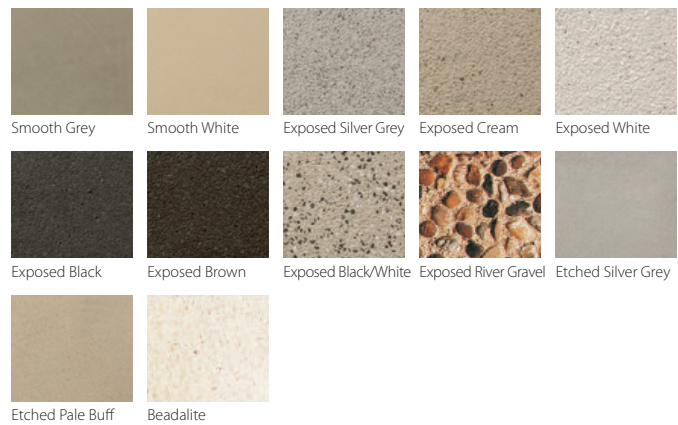

Four finishes are available: polished, ground, exposed and etched.

A bespoke specialist finish can be created to order whereby a surface is sandblasted to show a name, logo or pattern.

The Beadalite finish is a highly reflective coating which is composed of glass micro beads that are applied to the product, acting like thousands of tiny cats'-eyes and making the bollard 'light up' when vehicle headlights are shone across them.

Colours

Precise colour and surface texture should be judged from actual materials rather than photographic representations.

Customised Products

- Bollards and columns may be customised to receive a motif disc. Manufactured to special order the disc may convey instructions or provide information such as no entry, no parking, keep left or cycle path, alternatively they may hold commemorative plaques or corporate branding.
- Other options such as reflective bands and high visibility discs can be specified. Please contact our Sales Office for information on colours and sizes.
- Marshalls continue to produce a large back catalogue and would be pleased to quote for products not shown here.

Fixing

- Bollards are root fixed.
