

At Wychwood Water Systems Ltd we manufacture a complete range of quality Water Softeners. The range covers from small cabinet based commercial / heavy domestic units to large bespoke Triplex Water Softening Systems serving flow rates of 40,000 litres per hour plus.

The heart of the Water Softening Process is the ion Exchange resin which removes the hardness salts (Calcium and Magnesium), from the water being treated. At Wychwood Water Systems we do not compromise on quality. only the best resins are selected for the process.

For efficiency and the most economic use of the salt consumed per litre of water softened, the best water softeners are operated on a volume basis. Wychwood Water Softeners include the latest in process control, where water hardness, volume of salt consumed and size of unit are all fully programmable.

All Wychwood Water Softeners include a fully automatic brining system, ensuring convenience to the user and efficient regenerations.

Continuous Service and Technical Support

Wychwood Water Systems offer a full design and installation service

All Wychwood products are covered by a one year parts and labour warranty including a 24-hour technical helpline facility

A range of Service Contracts are available to provide continuous operational support and ensure the water system functions at optimum efficiency.

At Wychwood we also offer operator and maintenance staff training seminars at our clients premises

Product and System Features

- To compliment large Water Softeners Bulk Salt Saturators are available
- Duplexing is available, providing two or more Water Softeners in a continuous 100% duty / standby operation.
- All brine systems are completely automatic, requiring minimal operator input
- Remote monitoring is available with our indicator panel
- The Soft Water Monitor is available to provide continuous water quality monitoring
- For ease of installation and shipping complete skid mounted systems are available
- All regenerations are completely automatic with both volumetric and time initiation being available
- When using Wychwood Water Softeners as part of a complete water treatment system electrical outputs are available to provide system interlocks
