

# SCREW COMPRESSORS

## DELTA SCREW GENERATION 5 *PLUS*

Oil-free compression in the pressure range up to 4,5 bar (a)  
Volume flows of 120 m<sup>3</sup>/h to 2,650 m<sup>3</sup>/h

**AERZEN**

# MAXIMIZING ENERGY EFFICIENCY.

The ongoing development of AERZEN's successful compressor generation makes the demands of tomorrow the principles of today.

## The reference class:

### Delta Screw Generation 5 *plus*

Today's processing industry's demands for increased performance and ever higher gas compression efficiency are among the greatest technological challenges.

For decades, the most successful solutions have been coming from AERZEN. And now the renowned compressor specialist has made its premium class even better. New developments in the successful belt-driven Delta Screw Generation 5 compressors are setting new standards for reliability, performance and low lifecycle costs (LCC).

„STATE-OF-THE-ART OF COMPRESSION TECHNOLOGY:  
AERZEN Delta Screw GENERATION 5 *plus*“

# INCREASING EFFECTIVENESS. TECHNICAL INNOVATIONS AND PERFECTION: THE NEW LOOK OF ECONOMY.

Significantly increasing energy efficiency was our goal in continuing to develop the Delta Screw series – together with reducing energy costs and CO<sub>2</sub> emissions considerably for their users. To do this, we took a close look at every detail in the entire series. The result: the perfect symbiosis of high-performance stages, a lot of innovations and flow-optimized unit components. Each and every component has been precision tuned to handle specific volume flows. A big advantage to the user when it comes to efficiency and economy.

## **IE3. The new generation of electric motors for maximized efficiency.**

Although they won't become mandatory until 2015, AERZEN has decided to fit its Delta Screw Generation 5 *plus* packages with efficiency class IE3 motors.

These sophisticated motors are at the very top of the European "Premium Efficiency" class and have the potential for increased savings for you the user of the Generation 5 *plus* package.

*IE3 motor used by AERZEN*

### **The new IEC 60034-30 norm.**

It defines and harmonizes the efficiency classes for low-voltage rotary current asynchronous motors between 50 and 60 Hz. Starting 1 January 2015, motors with an output range between 7.5 kW and 375 kW must conform to efficiency class IE3, or IE2 with frequency converter.

- IE1= previous efficiency class ("Standard Efficiency" – comparable to EFF2)
- IE2 = present efficiency class ("High Efficiency" – comparable to EFF1)
- IE3 = future efficiency class ("Premium Efficiency")

## IEC 60034-30 efficiency classes for three-phase AC motors

All Aerzen screw compressors are fitted with energy efficiency class IE3 motors.

### Optimizing inflow: increased performance.

The accessories are also an important factor in the extraordinary energy efficiency of the new Delta Screw Generation 5 *plus* compressor packages. They have been adapted exactly to achieve peak values. To reduce pressure loss within the package to an absolute minimum, we use generously dimensioned sizes and check valves with broad cross-sections. Optimizing the fluid dynamics of the intake and outlet openings, combined with a new silencer design, ensure ideal airflows within the compressor.

### Innovative noise suppression design: less pressure loss, more efficiency.

The primary aim in developing this new generation of high-performance compressors was to significantly reduce pressure losses. We achieved this on the discharge side by eliminating the absorption material in the silencers while improving their fluid dynamics. The horizontally arranged, 5-chamber reflection silencer is the result of many years of research on the part of AERZEN's development team (patent applied for). Thanks to optimized cross-sections along with ideal chamber and pipe lengths, the package's noise level was reduced to less

than 80 dB(A), depending on operating parameters. And by the way: this discharge-sided silencer also serves as a spark suppressor in keeping with ATEX guideline 137 for explosion-protected systems. The best thing: it doesn't have any internal absorption material at all, material that tends to fall off and contaminate downstream processes. A KO criterion for the food and chemical industries.

Eliminating absorption material in the silencer provides many benefits

# INCREASING FLEXIBILITY - PROFITABILITY STARTS WHEN COMPRESSOR SYSTEMS ARE TAILORED TO THE PROCESS.

*Perfectly tailored to the myriad applications in power plant technology: Delta Screw Generation 5 plus*

**Leading companies in industries ranging from petrochemicals to cement have been relying on AERZEN for decades, and for good reason: The Delta Screw series is unrivalled in the assortment and flexibility of available models and how they can be adapted to a wide range of customer requirements. The Delta Screw Generation 5 *plus* series has set a whole new standard. The new benchmark class of dry-running screw compressors.**

**Power packs: The right model for your application.**

Delta Screw Generation 5 *plus* compressor packages are designed for compressing air, nitrogen and other neutral gases. Its strengths aren't limited to this alone, however. With their extraordinary flexibility, these compressors are ideal for a host

of other application areas: special gases, vacuum operations and booster applications. With 7 sizes in the 120 to 2,650 m<sup>3</sup>/h volume flow range alone, AERZEN has by far the largest portfolio on the market. The direct-drive models can even extend that range up to 15,000 m<sup>3</sup>/h.

# OUTSTANDING ROTOR GEOMETRIES: ADDED PERFORMANCE AT POSITIVE AND NEGATIVE PRESSURES.

Another unique feature: the screw compressors in the Generation 5 *plus* series come with a choice of specially designed rotor profiles for added flexibility. VML compressors have a 3+4 profile and are ideal for applications up to pressure ratio 3 (final pressure over intake pressure). That means they are also perfect for negative pressure applications up to 70% vacuum (0.3 bar abs.).

A special pre-inlet version can achieve up to 85% vacuum (0.15 bar abs.).

3+4 screw profile (VML compressor)

4+6 screw profile (VM compressor)

VM compressors have a 4+6 profile. They are tailor-made for positive pressure ranges (up to pressure ratio 4.5) and for intake volume flows of around 120 m<sup>3</sup>/h to 2,030 m<sup>3</sup>/h.

- VML compressor up to max.  $p_e = 2 \text{ bar (g)}$
- VM compressor up to max.  $p_e = 3,5 \text{ bar (g)}$

## $\pi_i$ - adaptable outlets for the perfect configuration.

The available outlet port choices enable the AERZEN compressor to be adapted for the process at hand. The various outlets in the cylinder, called  $\pi_i$ , are a measure of internal compression. This flexibility is decisive. In every Delta Screw Generation 5 *plus* compressor, the choice of compressor type and  $\pi_i$  can be optimized to best meet the desired pressure and volume flow. Over- and under-compression can be minimized, leading to maximizing the compressor's efficiency.

## 100% oil-free: The green light for sensitive applications.

Sensitive processes in, for example, the food or pharmaceutical industries require that compression be absolutely oil-free. The Delta Screw Generation 5 *plus* design meets this requirement 100%. A special oil chamber seal ensures that no oil enters the compression chamber. In addition, a vacuum generator evacuates oil vapor from the oil sump, separates the oil from the air and returns it to the oil circuit. This new design guarantees long-term oil-free operation. This has been confirmed according to ISO 8573-1, Class 0 by the TÜV Rheinland.

**Wide range of applications in both indoor and outdoor installations**

- Conveyance or compression of inert gases
- Pneumatic air or nitrogen transport of powders, bulk solids, ash, etc.
- Aeration of sewage tanks
- Blending of cement
- Vacuum forming for the glass industry
- Keeping waterways and ports ice-free
- Creating oil barriers
- Gas-air mixing installations
- Oxidation air for power plants
- Stationary unloading of tanker trucks
- Vacuum production for the paper industry
- Forced air for spun-bonded olefin production
- Aircraft turbine starters

*The right choice for special gases in the petro-chemical industry: Delta Screw Generation 5 plus*

*"Achieving emptiness": Delta Screw Generation 5 plus and vacuum production for the glass container industry*

# COMFORT REDESIGNED: INTELLIGENCE IS EVIDENT IN MANY DETAILS.

User friendliness and reliability are not ends in themselves. They mean lower lifecycle costs (LCC) and added efficiency in energy-intensive compression processes. In the benchmark Delta Screw Generation 5 *plus* units, these advantages begin with the AERtronic controller and continue well beyond 16,000 hours of operation.

## **AERtronic: the new control system for even more operational efficiency.**

The new AERZEN control system is standard with all belt-driven Generation 5 *plus* VM or VML compressors. It monitors and displays operational data, runs the OH counter, provides early notifications of operational events, and saves them together with related data for later traceability. The basic module contains all the functionalities necessary for running a compressor package. The input/output ports allow for almost unlimited modular expansion for sensors and communication devices. All visualization, navigation and control functions can be handled intuitively on a 4.3" TFT LCD color touchscreen display that is integrated into the front of the acoustic hood for easy access.

## **Digital advantages that pay for themselves**

- Increased system efficiency, safety, and availability
- Powerful functionalities available even in the basic equipment
- Expandable with additional modules to meet changing needs
- Intuitive operation with the TFT LCD color touchscreen display
- Optional AERtronic master package for combining up to 12 machines into a powerful network, with energy savings of up to 30%
- For use in all AERZEN screw and rotary lobe compressors and positive displacement blowers
- Deployable regardless of manufacturer
- ATEX applications for multiple zones

**Compact design, easy handling.**

Reducing installation time and maintenance costs was something that Generation 5 *plus* developers focused on. They began with an extremely compact design: the packages are up to 50% smaller than conventional models. They can be easily moved on site with a pallet truck or forklift. Another plus of the design: the packages can be installed side by side while maintaining accessibility for later service and maintenance work. Reducing space requirements also means smaller machine rooms, and that in turn helps lower overall costs.

**The operating and maintenance concept:  
intelligent, simple, head-on.**

All controls are located on the front of the package. Any components needing regular maintenance can also be accessed from the front. About 0.8 m in front of the machine is the minimum access space needed. The packages come complete with an integrated service kit – motor lifting jack, filling funnel, and the first oil fill – to make commissioning and subsequent maintenance easier.

*Compact design to minimize space requirements:  
side-by-side variant*

**Inspired: checking oil levels during operation.**

The new oil system is one of the outstanding features of the Generation 5 *plus* machines. The AERtronic control can monitor the oil level even during operation. In practice, this means that shutting down the system to check the oil levels – and ongoing processes and production along with it – has become a thing of the past. In addition, the intervals between necessary oil changes can be doubled to 16,000 operating hours by using AERZEN's Delta Lube 06.

**Patented belt drive:  
for lower maintenance efforts and increased flexibility.**

Belt drive is standard on Generation 5 *plus* screw compressors. This allows for a wide range of possible transmission ratios, simply by choosing the right sheave diameter. Even retroactive adaptation – as a result of new operating parameters, for example – can be done easily and economically. The drive motor is mounted on a hinged support, with its own weight providing optimal belt tension. No retightening of the belts is necessary.

*Filling the compressor with lube oil: never a problem*

*Removing the intake filter: quick and easy*

# LIVING QUALITY. SUSTAINABILITY IS MORE THAN JUST A BUZZWORD AT AERZEN – IT’S A PRINCIPLE.

AERZEN is known the world over for premium quality and trailblazing development work. The main impetus behind this has always been the search for sustainable solutions with measurable added value. For both our clients and for the environment. No accident that our pioneering achievements since 1864 have had a decisive influence in advancing compressor technology.

## Reducing lifecycle costs – where we focus our innovation energies.

At more than 80%, energy’s share of total costs is by far the largest over the life of an installation. Far more than the initial investment or maintenance costs.

This is why the Generation 5 Delta Screw series was created: to measurably reduce energy costs. To help you secure your market lead so you can meet future requirements economically, safely, and sustainably.

## Delta Screw Generation 5 plus: Life-Cycle-Costs

Average operational costs for a compressor over 10 years (max. operating duty):

- Energy
- Investment
- Maintenance
- Installation

## High-end quality. For greater value retention and longevity.

With more than 70 years of experience in the manufacturing and deployment of screw compressors, and with its know-how as the world’s market leader, AERZEN’s compressors have a proven record of minimal downtime. Our high quality standards – whether applied to our own research and development efforts, to materials and workmanship, or to the precision components from reputable partners – lead to an impressively long service life. All this results in the high value retention and reliability of our products.

**Sustainability: where economy meets ecology.**

Sustainability and a responsible use of resources have always been a pillar of AERZEN's corporate philosophy. It goes without saying that they also apply to product design.

Compressors from the Delta Screw Generation 5 *plus* series are almost completely recyclable. Noise pollution levels are among the lowest in the industry. Lube oil is kept out of the rotor chamber by means of a patented seal. It is not surprising that these new packages are certified for 100% oil-free compression (see page 8).

**Delta Screw Generation 5 *plus*: The efficiency principle**

**Always there for you. World-wide.**

Our systems are known for their long service life and minimal maintenance costs. In those rare cases where you need our help, we are there for you. With over 1,800 employees worldwide in over 40 affiliates, with representatives in more than 100 countries on all continents. That's how reliable we are.

# DISCOVER DELTA SCREW GENERATION 5 PLUS. A COMPRESSOR SERIES WITH REMARKABLE CAPABILITIES.

■ **Adaptable.** A broad range of specialized accessories and a large number of options

■ **Efficient.** Lowest costs per m<sup>3</sup> of compressed gas or air

■ **Quiet.** Silencer and acoustic hood combine to keep noise emissions to a minimum

■ **Intelligent.** Failsafe electronics with numerous interfaces and communication options

■ **Complete.** Fully integrated compressor package includes filter, silencer, oil system and controls

■ **Ecological.** Energy efficiency class IE3 (premium efficiency) motors, long intervals between oil changes, low energy consumption

## The reference class. A class of its own.

The single-stage, oil-free screw compressors in the Delta Screw Generation 5 *plus* series are universal tools. They bundle all the know-how of a world market leader in compressor technology to offer you 'the user' maximum efficiency. These innovative machines are belt-driven to provide air and nitrogen applications at positive pressure, negative pressure, and in a range of nominal sizes (see page 20 ff.). The flexible modular system allows for almost any combination of compressors and accessory components.

The belt drive allows for optimal adaptation of the system to the job at hand, as well as for any changes that may become necessary later. In addition, the belt drive allows for precise configuration – an important feature given that the greatest savings come from saving energy. This means, for example, that a 5% deviation in the volume stream means a 5% increase in energy consumption.

- **Oil-free.** 100% oil-free for sensitive processes
- **Premium technology.** High-quality materials for long service life regardless of demand
- **Process-safe.** Reflection silencer with no absorption material
- **Service friendly.** Compact package with easy access to all wearing parts
- **Ready to run.** Engineering and package from a single manufacturer
- **Universal.** Deployable even in hazardous ATEX areas and under difficult ambient conditions

**Generation 5 plus. Five decisive advantages.**

AERZEN has been producing oil-free screw compressors since 1943, making it one of the most experienced manufacturers in the world. Delta Screw Generation 5 plus is the fifth generation in AERZEN's most successful line of compressor packages and also comes with five main advantages:

- Energy efficient, reduced life-cycle costs
- Significantly reduced noise levels
- ATEX certified for spark suppression
- Space-saving compact design
- User friendly and low-maintenance

# EACH PROCESS HAS ITS SPECIAL FEATURES. IT HAS NEVER BEEN EASIER TO ADJUST ONE COMPRESSOR ACCORDINGLY.

As an AERZEN customer, you can be sure that you will always get the machine you need. We use specialized analytical tools to aid in the process. Individually produced energy consumption maps show the pressures and volume flows where the compressor is operating at peak isentropic efficiency. Every AERZEN machine is 100% tested against technical design data and subsequent operational data. Guaranteed.

As an AERZEN customer, you can be sure that you will always receive the machine that is optimal for your needs. Individually produced energy consumption maps show you the pressures and volume flows where the compressor is operating at peak isentropic efficiency.

Compressor performance data can be displayed in different ways. Industry-standard performance diagrams show all performance values (motor rating, temperature difference, volume flow) as a function of primary rotor rpm and pressure difference.

The AERZEN service package - Complete set of original parts

Sealing gas regulator for exhaust compression

**Deliverables. All important components are included in the basic package.**

- Proven VM and VML screw compressor stages from AERZEN with pressurized oil lubrication, including shaftdriven oil pump, oil filter, oil pressure regulator, oil cooler, complete oil circuit piping
- Torsion-resistant base frame with integrated oil pan for safe forklift or crane transport
- Electrical negative pressure generator for safe oil chamber ventilation
- Base support with hinged mount for three-phase AC motor
- Suction intake filter and suction silencer integrated into base support to save space
- Optimized, self-tightening belt-drive
- Pressure-side reflex silencer (with no absorption material); includes certification as spark suppressor
- Safety valve (prototype tested) with possible pipe connections
- Split disc check valve
- Axial expansion joint for connecting to the discharge piping
- Vibration isolating mounts
- Pressure and temperature sensors fully connected and wired
- AERZEN AERtronic management system for controlling, protecting, and maintaining the machine. Monitoring and display of suction intake pressure, final pressure, oil pressure, and oil level, as well as final temperature and oil temperature
- Initial oil fill and commissioning kit
- Complete documentation

**The accessories. A plus for efficiency.**

- Driving motors (three-phase AC motors) from well-known manufacturers (customer motors if preferred); also motors that meet NEMA standards
- Acoustic hood for the entire compressor package – for use indoors and out
- Start unloading systems (depending on compressor type): discharge start unloading valve for VML compressor (process controlled), or idle/full load governor for the VM compressor including suction throttle, relief valve, and pressure switch
- Motor starter (e.g. direct or star-delta startup)
- Separate frequency inverter cabinet
- Overflow control valve (process controlled) to keep end pressure (or vacuum) at a constant level
- Aftercooler (also available as integrated solution), available as air/air cooler or air/water cooler, also available with centrifugal separator and automatic drainage
- 2-year and 5-year service packages

# ACCESSORIES AND OPTIONS: THE SKY IS THE LIMIT.

## The modular system. For client-specific options.

- Nitrogen compression model, with suction silencer, temporary inlet strainer, and suction-side expansion joint
- Special paint
- AERtronic control system with profibus connection
- ANSI suction-side/discharge-side flanges
- Pressure vessel model conforms to ASME Code VIII
- Compressor suitable for maritime use
- Acoustic hood for increased noise control requirements or extreme ambient conditions:
  - Desert locations (with special sediment collecting tank)
  - Cold environments (with integrated heating and gravity-activated blinds)
  - Earthquake-resistant setup
- Seal gas version
- Coating for all parts that come in contact with the gas
- Food-safe lubricants
- Vibration monitoring
- Twin oil filter (enabling switching filter during operation)
- Possible outlet pipe for safety valve and vacuum oil sump demister
- Impedance corrector for divergent voltages in electric components
- ATEX certification e.g. for motors operating in certain ATEX zones, intrinsically safe instrument panel, ATEX documentation
- Instrumentation to meet client specifications
- Vacuum variant
- API valves
- Design / approval in conformance with PED 97/23/EG (AD2000 and EN13445), ASME Code VIII Div.1, SELO (China License), TR (certification in Russia)
- Client acceptance tests / acceptance certificates in conformance with to LLOYD'S, Det Norske Veritas, Germanischer Lloyd, and ABS

## Example:

Sealing gas regulator for exhaust compression

Pressure and temperature transmitter for monitoring argon compressors

Intrinsically safe, specialized transmitter instrumentation – for use in hazardous zones

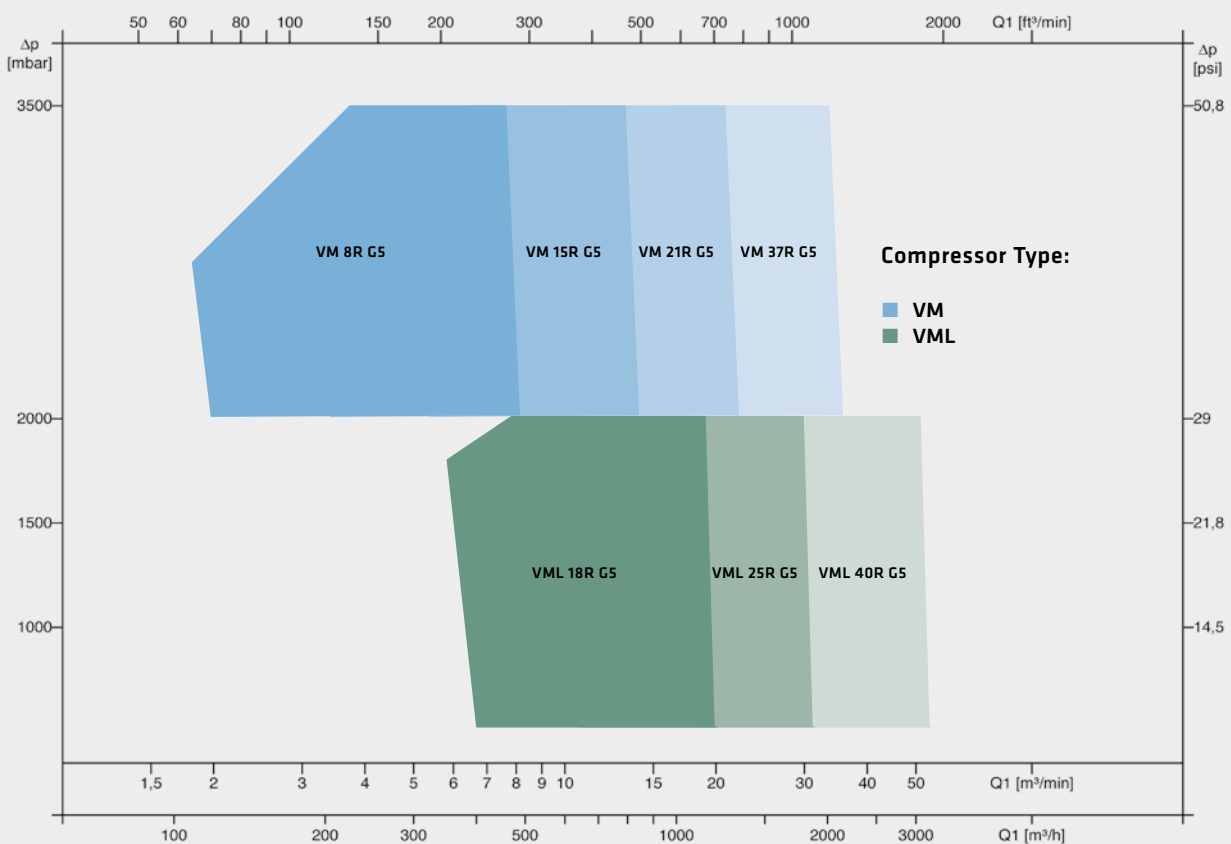

Particularly in the bulk material industry the application ranges are widened considerably by means of the ATEX-certification.

# PRODUCT DIVERSITY. THE RIGHT MODEL FOR OPTIMAL EFFICIENCY. THE MANUFACTURER'S REPUTATION FOR SAFETY.

There are 7 belt-driven, oil-free Delta Screw Generation 5 *plus* compressors alone for volumes flows of up to 2,650 m<sup>3</sup>/h. And with the second series – direct drive compressors – the application range extends to 15,000 m<sup>3</sup>/h.

Delta Screw Generation 5 *plus* – fields of application

AERZEN has the largest selection of screw compressors on the market today. This means that clients can almost always find a compressor that will perfectly match their specific applications. Facilities where compressors had to run below the minimum speed because they were too small for the job, or whose accessories had insufficient cross-sections – these are now a thing of the past.

Being a leader in technology individual components and

**Services from AERZEN – safety *Plus* for you.**

- Commissioning done by the experts
- Individualized training for your personnel
- Client-specific service and maintenance contracts
- Delta real-time monitoring of your compressor
- On-site inspections possible
- Rental machines are available worldwide through our subsidiary company Aerzen International Rental

- 22 3/2 way valve

# PROVEN PERFORMANCE: FROM MINIMUM TO MAXIMUM VOLUME FLOWS.

Anyone looking for low LCC or quick amortization will want to get a VM or VML package because investing in the Generation 5 *plus* makes sense from a business viewpoint. We're happy to assist you in choosing just the right combination. Our advisors are at your service for any and all questions about configuration and applications. Anywhere in the world.

## Success by the numbers, black on white.

The following pages show performance data for all 7 belt-driven VM and VML compressors. They are based on the following process criteria:

- Compression medium: air
- Moisture: 0%
- Air intake temperature: 20 °C
- Intake pressure: 1 bar (absolute)

### Equipment designation:

VM compressor, short rotor profile, pressure differences up to max.  $p_e = 3.5$  bar (g)

VML compressor, long rotor profile, pressure differences up to max.  $p_e = 2$  bar (g)

Positive pressure					
Compressor model	Max. allowable inlet press. [bar abs]	Differential pressure $p_e$ [bar]	Volume flow [m <sup>3</sup> /h]**	Motor output [kW]	Max. noise pressure level [dB (A)]****

**AERZEN. Compression the key to success.**

AERZEN was founded in 1864 as Aerzener Maschinenfabrik. In 1868 we manufactured the first positive displacement blower in Europe. In 1911 the first turbo blowers followed, in 1943 the first screw compressors and in 2010 the first rotary lobe compressor packaged unit of the world. Innovations made by Aerzen accelerate the development of the compressor technology more and more. Nowadays AERZEN counts among the oldest and most important manufacturers of positive displacement blowers, rotary lobe compressors, rotary piston gas meters, screw compressors and turbo blowers. And in many fields of application AERZEN counts among the uncontested market leaders.

In over 40 affiliates around the world and with more than 2,000 employees, we put our experience to work on constantly improving compressor and blower technologies. Our technical competence and the ongoing dialogue with customers form the foundation on which AERZEN's intelligent and successful products are built. Solutions that constantly set new standards for energy efficiency, performance and quality, and that meet constantly changing regulations - with post-sales service available all around the world. Challenge us!
