Concealed ground fixing system

Materials & processes: FSC iroko hardwood
Sand cast powder coated aluminium
316 Grade stainless steel

Quantity of products: 34

Project value: £68k

Status: Phases 1 & 2 completed

Project Overview: Rother District Council have developed the ‘Next Wave’ project to regenerate the Bexhill sea front. Benchmark have played a key role in providing street furniture that will not only compliment the distinct character and identity of the site, but also exist for many years in the harsh saline environment. The products supplied are from the Wales & Wales NOROLK and CHICO ranges, with extensive bespoke elements to the project including inset wall top benches and huge flag pole storage boxes. The products are constructed from sand cast and die aluminium with timber elements in FSC iroko hardwood. The second phase of this project has just been completed.
