

A range of materials to meet any car park marking requirements

The selection of materials for marking within car parking areas is extremely important, as ongoing and repetitive repainting or remarking, disrupts the driver and often affects revenue. To this end, it is imperative that the correct materials are selected to avoid any disruption.

**Geveko Markings have the answer
...and it's a simple one at that!**

Many years of product development have resulted in a wide range of compatible materials for all marking projects, including roller applied and spray paints, precision cut signs, symbols and lettering plus a range of traffic calming solutions, that are easily applied, extremely durable and highly visible. Each product within the range offers the ability to add, change or mask any existing markings, allowing the contractor to redesign or alter any current parking protocol.

Inexperienced applicators have the opportunity to undertake on-site training and guidance from the manufacturer, a service that is offered freely.

Contact us today to discuss your project.

Product selection

Large area colour

PlastiRoute™ Rollplast - mainly pedestrian and slow moving traffic applications

PlastiRoute™ Rollgrip - Traffic areas, including ramps and steep walkways.

Lines and demarcation

Achieved using preformed thermoplastic rolls over PlastiRoute Rollplast or PlastiRoute Rollgrip or it can be applied directly to asphalt or concrete/stone surfaces via PREMARK™ or Viaxi™ primer.

Alternatively, spray applied single pack road marking paints, solvent or acrylic based, can be used depending on traffic density.

Signs/symbols/arrows/text

PREMARK thermoplastic over PlastiRoute Rollplast or PlastiRoute Rollgrip or applied directly to asphalt or concrete/stone surfaces via PREMARK or Viaxi primer.
