# GeoPave - resin bound paving

A stylish and modern alternative to traditional paving

A beautiful, modern alternative to traditional paving, resin surfacing products have increased in popularity for use in public spaces, commercial and retail areas, domestic driveways and pathways.

A resin bound system is a paving system whereby aggregate and a resin binder are combined. It is then applied to a prepared surface using a hand trowel. The aggregates bind together and fixed in place by the adhesive nature of the resin. This gives a very smooth finish that is ideal for pedestrian areas and disabled access.

Our range of BBA approved resin paving systems, GeoPave, combine durability and performance with visual appeal. Available in a range of colours and textures, from blends of specially selected, natural, aggregate of varying sizes and colours, GeoPave produces a decorative surface that is hard-wearing and requires very little maintenance.

Couple this with the potential to use design elements such as block pavers and edging and GeoPave provides the opportunity to create unique surface patterns and text ideal for designing within the built environment.

## Benefits and Features

- BBA Approved resin systems
- Permeable - SuDS compliant
- Natural looking finish
- Non-UV and UV resistant grades
- Cost-effective
- Durable and strong
- Easy to maintain
- Incorporate design elements

## Tried, tested and BBA approved

Our products are developed and manufactured to the highest quality with our customers in mind. We are continually developing our material to meet customer requirements for durable and long-lasting products. We have a dedicated Research and Development laboratory where all our products are designed, tried and tested before we make them available to our customers.

But don't just take our word for it. . .our resin bound systems have been approved and certified by the BBA. The BBA maintain the high standards of quality and safety within our industry, testing and certifying materials as safe and fit-for-purpose.

## SuDS Compliant

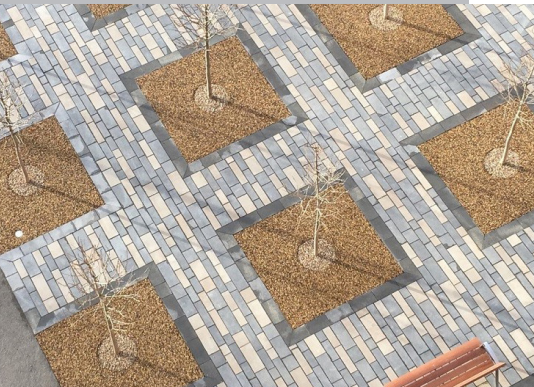

The GeoPave range of resin bound surfacing can be used as part of a SuDS scheme, it provides a water-permeable surface when laid on a porous substrate such as an open grade binder asphalt.

Once installed, GeoPave has open voids across the surface, allowing surface water to filter through, making it an ideal permeable system for driveways, paths, tree pits and areas prone to standing water thus making it SuDS compliant. The use of permeable paving also prevents water pooling on impermeable surfaces, avoiding the hazards of puddles and the formation of ice.

## Tree pits

Paving and hard landscaping works frequently require additional specialist treatment to ensure that the area immediately around trees (tree pits), in public landscaping are free-draining, yet solid, sound and strong enough to allow inevitable foot traffic.

GeoPave resin bound surfacing is ideal for tree pit application, as it removes any potential slip or trip hazards, prevents the loss of soil or growing media and stops the build-up of rubbish and litter around the trees. Using a resin bound system can also aesthetically enhance an area and can complement the surrounding paving, according to a specifiers requirement.

## Bringing design to the surface

The stone used in our design blends have been selected for their appearance and performance. Combined with the GeoPave resin binders, they have been subjected to testing both in-house and with an accredited, independent testing house enabling us to be able to offer natural stone blends that achieve high levels of performance and durability, whilst delivering beautiful surfacing for the built environment.

The suitability of a chosen blend is dependant on vehicular load bearing and type of use, for example pedestrian and light vehicle. Please contact our Technical Team for advice.

### Our resin training offers you:

- In-depth knowledge of how to prepare a surface ready for installation
- Step-by-step installation experience following our proven methods
- Familiarity with specialist equipment such as PowerFloats and Sleds
- Maintenance and remedial repairs
- On hand technical advice and support on your first installation
- Guidance on PPE and health and safety on-site

## RESIN SURFACING ACADEMY

Resin Surfacing is one of the fastest growing sectors in the built environment and offers an attractive and durable alternative to traditional surfaces.

Whether new to Resin Surfacing or looking to polish your skills and become one of our Approved Installers, our Resin Surfacing Academy will equip you with the practical and theoretical skills needed to produce consistently high-quality projects and grow your business.

Our experienced team have over 50 years' experience using Resin technology and look forward to welcoming you to our new, purpose-built facility which has been designed with social distancing in mind.

After a brief classroom introduction which covers some of the theoretical aspects, the training focusses on practical application where you can get 'hands-on' with the material and specialist equipment used by professionals.
