

2500mm WIDE BIG ROLL SPECIFICATION SHEET

DETAILS

County Turf, continuing with the company's innovative development program, has released the widest turf roll in the world at 2.5metres wide (2500mm). An in house construction of this harvester has taken 3 years in development and trials, and now produces a perfectly precision cut 2.5metre wide roll capable of being plastic wrapped to keep the grass sward in pristine condition.

The finished roll is tight, compact with crisp clean cut edges allowing for a stable and level installation.

USES

The 2.5metre wide turf can be used on large scale pitch installations where the allocated time frames for pitch installations is becoming increasingly tight and will allow for a pitch turn around installation in 12 hours or less.

The finished 2.5metre wide roll surface has 70% less joins compared to a 0.75metre wide roll and even 50% less edges compared to the 1.25metre wide system so the playing surface is more uniform, stable and more consistent in play.

This turf can also be harvested in conventional thin cut turf for grow in projects and offers significant savings in laying time whilst reducing the number of turf edges that can be prone to drying out in the summer months.
