V-Rack

High Density
High Security
Modern
Easy to use
Customised panels
End frame figures

Overview

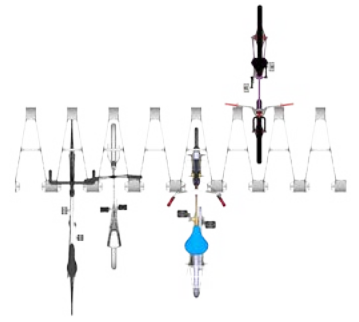

The V-Rack is a innovative new product by Cycle-Works that is designed to offer high security, high density and modern cycle parking. The rack achieves high density by using a high-low arrangement and 400mm centres between adjacent racks. The wheels of the opposite racks use the same space to give a really high density layout. Only 3100mm is needed for 2 rows of bikes, compared to 4000mm with 2 rows of Sheffield racks.

High Density

- Hi / low / hi / low spacing
- 400mm centres
- Back to back

High Security

- Front wheel protected
- Integrated locking chain
- Locking points for both wheels
- Can be secured with one lock

Modern & Attractive

- EU Patented design
- Strong visual deterrent
- Designed and 'Made in Britain'

Easy to use

- The bike rolls into place
- Accessible locking bar
- Easy to remove

Customised panels

- Different shapes
- Most RAL colours
- Laser cut logo

End frame figures

- Customised options
- Tailored to a business
- Adds protection
