

Case Study

Hillington Business Park, Glasgow

Established in 1938, Hillington Park is Scotland's largest business park and home to over 500 organisations employing over 8,000 people. Founded on manufacturing and engineering, the Park has grown through new development and regeneration and today houses key business clusters in automotive, construction & building products, transport, health & technology. Hillington Park is driving for a safer and sustainable area for businesses and staff.

Our Solution

Initially Hillington Park trialed 10 Velo-Safe Lockers in 2017 and these proved extremely popular. As a result, another 30 lockers were ordered and these were installed at the end of September 2019. These were installed in banks of 4 - 8 lockers throughout the park to give users parking near their buildings.

A benefit of using the Velo-Safe locker on a site such as Hillington Park is the numerous ways they can be configured. Designed to be space-efficient and versatile they can be arranged to best utilise the space available. The actual layouts were decided by the park in conjunction with experienced cycle-works installation team.

The unique Velo-Safe layout makes maximum use of available space.

Fits neatly into a dead corner.

8 Velo-Safe lockers back to back.

40 Velo-Safe lockers are now installed across the business park.

"...we saw the demand to introduce 30 more lockers at various other locations within our business community and to encourage more to cycle to work"

Louise O'Connell
Marketing & Transport Plan Manager, Hillington Park
