

IOTA's Granite street furniture planters

The term 'street furniture' covers a wide array of equipment which is designed and installed for the safety and convenience of the public. This can include planters, which often serve both a practical and decorative function.

Within a street furniture scheme, IOTA's heavy duty planters can perform a variety of functions – for example:

- to create a protective screen along a busy road
- to guide the flow of pedestrians along a route
- to act as a vehicular barrier, to limit vehicular access
- to safeguard a pavement trip hazard
- to demarcate the boundary of public / private areas

With a clean modern aesthetic, IOTA's Granite planters are increasingly specified as street furniture – as a stylish, and often cheaper, alternative to more utilitarian planters in concrete, composite or metal. The granite stone used by IOTA is highly resistant to physical attack, graffiti is easily removed, and its close granular structure means that minor damage is not readily apparent.

In addition to stock lines, IOTA offers a custom manufacture service in a range of natural stones. This service is not limited to planters, and can include other items of street furniture (such as chairs, benches etc.).
