

Custom granite planters and street seating commissioned by Linden Homes

The planters measure 1300mm across with a height of 700mm, and the seats are 600mm cubes. Both the planters and seats are robustly constructed from 25mm thick granite, reinforced internally with substantial fillet sections. The planters weigh 370kg each, and IOTA conducted the installation.

Linden Homes' scheme required the construction of a new roundabout on Popley Way, with a landscaped gateway into the residential development. IOTA's planters and seats are ranked along a central cobble section of the pavement both sides of the roundabout, creating a strong visual line from all directions leading to the gateway.
