
PAS 68 BOLLARD PLANTER – INSTALLATION GUIDE

This guide outlines the installation process for the planter designed for Frontier Pitts to meet the requirements of their PAS 68 Terra Planter.

November 2014

Step 1: Place the planter over the bollard, having first removed the anti-tamper security grille at the top of the planter.

Note: The fastening ring is wider than the bollard, leaving a space between the two of circa. 25mm all around. This allows the planter to be levelled, even if there is a fall to the ground underneath.

Step 2: Position and level the planter, prior to fastening the planter to the bollard.

Step 3: Extend the 4 threaded rods on the fastening ring, to secure the planter firmly to the bollard at the desired position and level.

Step 4: Back off the locking nuts on the 4 threaded rods, to lock the rods firmly in position.

Step 5: Seal the gap between the planter fastening ring and the bollard, using the self-adhesive butyl flashing tape supplied.

Step 6: Cover the fastening ring with drainage material, such as Leca, and then fill void between planter and bollard with compost.

Step 7: Install the cradle for the self-watering reservoir, inserting it inside the bollard.

The self-watering reservoir cradle - installed.

Step 8: Install the self-watering reservoir, placing it into its cradle within the bollard.

Note: For optimal plant establishment, the rootball should be divided, and roots spread also into the composted void area between the bollard and the planter.

Step 9: Fill the bollard and planter with compost, and plant according to the instructions for the self-watering reservoir supplied.

Step 10: Insert one half of the anti-tamper security grille into the top of the planter.

First half of anti-tamper security grille - inserted.

Step 11: Locate the top of the reservoir filler pipe into its retaining hole in the security grille, and then insert second half of grille.

The anti-tamper security grille is fastened with the screws supplied.

The anti-tamper security grille - installed.

If desired, the security grille may be dressed with decorative mulch.
