

COMPANY:
Dempson Ltd

LOCATION:
Maidstone, Kent

OVERVIEW:
**Warehouse segregation
for new workspace**

SOLUTION:
**Flexiwall® 21m wide x 10m
high - with a PVC strip door**

WHAT DID THEY SAY:

"The Flexiwall installation was a thing of beauty, completed ahead of schedule with no fuss. It has made a massive difference to the working area conditions"

Dempson Ltd, based in Maidstone, are a company that manufacture paper bags of many formats. Business developments meant they needed to create a new printing area within their existing warehouse space.

As people would be permanently working in the new printing area, the ability to adequately heat the space was essential; to ensure compliance with Workplace (Health, Safety and Welfare) Regulations 1992, which place a legal obligation on employers to “provide a ‘reasonable’ temperature in the workplace”.

Furthermore, Dempson Ltd were conscious of the cost and environmental impacts of heating the full warehouse on a permanent basis, and instead knew that heating just the new designated area would be much more cost and energy efficient; now they needed to find an effective solution to create the enclosure.

Westgate's Flexiwall has been used to create temperature controlled environments and therefore was perfectly suited for this project. Flexiwall also installs quickly, allowing businesses to adapt to changes in their working environment in a cost-effective and efficient way.

Westgate installed a Flexiwall partition that was 21m wide x 10m high – with a PVC strip door for access.

The installation process was completed within just two days, which is another great benefit to the Flexiwall solution; minimum impact on your operation, reducing the overall costs associated with a project.
