introduction to fwd

fwd are experienced design consultants specialising in the design of unique pedestrian and transport wayfinding and information systems that communicate the identity and navigation of places and spaces. We have extensive national and international experience working across public and private sectors and have the proven tools to deliver the highest standards of accessible information and fit for purpose signage product, detailed for durability and ease of updating.

As experts in the design and implementation of pedestrian wayfinding systems we recognise that

not everyone has the budget to fund bespoke design. We have addressed this challenge with the creation of our own range of quality-designed signage systems developed from our best practice experience and standards. Our ready-to-go systems are modular and can be easily and quickly customized to reflect your brand and to create a unique local design solution.

To deliver a quality installation we partner with specialist manufacturers we know well from previous collaborations implementing many world-class wayfinding and signage projects. As the supplier they will

support you by having your signage installed within a short lead time and because the fwd product ranges are already designed, developed and tested, we can provide up front costs helping you accurately budget projects from the very start.

Alternatively you can tender your procurement with confidence, knowing the end result will be of the highest quality design and manufactured to your precise specifications.

We can support the supply of our signage ranges with our consultancy services including wayfinding, identity, graphic and map design services.

kara is the speedy installer

kara is a brand new innovative signage system designed to bring a quality specification to high street statutory signage at a cost effective price.

A post mounted system designed to quickly and easily fit around existing posts or lamp posts of any size using standard Signfix clamping fixings.

A small number of standard system components deliver a range of different sign configurations offering a breadth of flexibility and versatility of application.
