Stockley Park
Hayes

Architect:
ESG Capita

Contractor:
ISG Fit Out Ltd
Alex Mayhew (Design Manager)
Alistair Barton (Financial Manager)
Tim Allen (Project Manager)

Job Type:
Design, Supply and Install

Langley Design were asked to provide an external storage solution for this high-quality unit extending the impressive Stockley Park development in Hillingdon. The planning for the scheme required green roof cycle shelters and bin stores to match. Our sedum roof timber frame cycle shelter with slatted clad end walls, also included built-in planting systems on each end for planting climbers to further blend the shelter into its surroundings. The large bin stores were also constructed using the same timber wrapping around a galvanised steel frame to provide a more aesthetic and secure area to store multiple Eurobins. The project was designed, manufacturer and installed by the Langley Design team and the finished provision matched perfectly the visual as envisaged by client and architect.
