

Langley Design were delighted to begin working with Halsall Construction on this housing project which consisted of 21 new units within a redevelopment of an inner city brownfield site which provided much needed quality affordable housing for the area. Langley Design always look to provide first class products alongside excellent customer service so having the opportunity to work with Halsall for the first time was exciting. The project needed to provide covered cycle parking and enclosed bin storage facilities for the residents. Due to Langley Designs flexibility within the design and manufacture of our products tied in with our extensive experience in the market place, we were able to offer Halsall a solution that others hadn't even considered. Our bespoke manufacturing capabilities enabled us to produce a bin store with powder coated aluminium panels as the infills in lieu of the traditional timber design. The powder coated panels created a striking visual alongside the timber clad cycle store we also provided the site. All products were manufactured here in Wiltshire. We received excellent feedback on this project and both Halsall and their client were very impressed with the products. We look forward to working with them again on future projects.
