

TRANSPORT CYCLE STAND

Hoop stands with taper / signage plates

The Transport range of cycle stands incorporate a wide taper plate with integral cycle and parking logos. The range is available in polyurethane elastomer (PU) coated steel and stainless steel as standard, with galvanised / coated mild steel as an option. Polyurethane is durable material able to withstand the rigours of the outdoors as well as damage caused by cycle chains. In addition to providing an extra point to secure bicycles, the taper plate aids detection by the partially sighted.

Note: Transport Cycle Stand was previously known as **TFL600**

Root fixed version*

Crimped tube end aids embedment in concrete foundation

Bolt down version

Base plate with 4 no. Ø10 holes for ground fixing

* Root fixed versions of Polyurethane stands have a bar welded to the ends of the upright tubes in lieu of a crimped end, as shown on the Hammersmith

TRANSPORT

TRL 600

Ø50mm Polyurethane elastomer coating over galvanised steel core, painted black with vinyl logos, root fixed
750mm x 760mm a/g x 300mm b/g

TRL 600 S

Ø48mm Stainless steel bright polished, root fixed
750mm x 760mm a/g x 300mm b/g

OPTIONS:

- Base plated for bolting down
- Stainless steel in grades 304 or 316
