

Greenfix GGR14 Turf Reinforcement Mesh

Greenfix GGR14 grass reinforcement meshes have been specially designed, using carefully selected high density plastics to allow permanent trafficking – car or pedestrian – to grassed areas where and when this would not normally be considered. Greenfix turf reinforcement mesh achieves this by reinforcing and protecting existing grass areas against traffic damage (vehicle / pedestrian wear and rutting) whilst retaining and keeping the natural look of grass cover.

Greenfix turf reinforcement meshes will allow prolonged summer and some winter use subject to factors like frequency of use, type of traffic, nature of soil and drainage. This would include parking on a daily basis, access to areas closed off in the colder, wetter months and disabled access.

GGR14 grass protection meshes have been specially designed to allow quick and maximum grass entanglement, giving structure and encouraging the mesh to disappear into the grass. The plastic mesh has also been designed with an oscillated structure providing enhanced anti-slip properties whilst retaining the necessary resistance to damaging traffic movements.

Product	Size	Thickness	Weight	Material	Colour
GGR14	2.5m x 15m	14mm	2kg/m ²	HDPE (Part recycled)	Green
	2m x 20m	14mm	2kg/m ²	HDPE (Part recycled)	Green
	2m x 10m	14mm	2kg/m ²	HDPE (Part recycled)	Green
	1m x 10m	14mm	2kg/m ²	HDPE (Part recycled)	Green
