

“Amberol’s in-built reservoirs contain all the water ready for the plant to use and there is no waste. They also give us a saving in manpower and fuel as we need to send maintenance teams out less frequently. All in all, the units are very efficient and stop money going quite literally down the drain.”

Eddie Curry, Nottingham Parks & Open Spaces

Standard Planter Features

- 4 Supplied with the unique Aquafeed™ Self-watering capillary action wick and dispersal matting system that keeps compost optimally moist and plants healthy and strong**
- 4 Generous sub-soil water reservoir provides permanent water source and keeps evaporation to a minimum**
- 4 Double walled construction keeps plants cool in summer and insulated in winter
- 4 Easy access filling points allow units to be topped up no more than once or twice a week
- 4 Overflow holes above the dispersal pad prevent roots becoming saturated
- 4 Inner liners are available separately where indicated for quick, safe and easy off-site planting up, and are ideal for seasonal changeovers.
- 4 Made in Britain with recyclable polyethylene, units are virtually maintenance free and are carbon friendly
- 4 Available in 18 standard colours (see colour chart on centre pages)

** requires planters to be topped up with water and nutrient no more than once or twice a week dependent on ambient air temperatures
