

The Nation's Favourite Paving

For almost 200 years Yorkstone has been the nation's favourite choice of paving stone. With its outstanding technical properties this stone was originally supplied as a hand split riven paving but now with modern techniques it is mainly supplied in either Diamond Sawn or as Greenmoor Rustic. With a proven record of durability, longevity, strength and slip resistance, Marshalls Yorkstones have no equal in terms of range or quality.

Strength

Most people think that granite is stronger than Yorkstone but this is not true. Marshalls range of quality Yorkstones is far stronger than most granites, so they have no difficulty carrying modern urban loadings.

Slip Resistance

Yorkstone flags remain the best slip resistant paving available, with the added benefit of retaining their non slip properties as they wear.

Colours

A common misconception is that all Yorkstones are buff but this is not the case. Most Yorkstones vary in colour from buffs through to Blue Grey and Brown as shown on pages 18 & 19. As naturally occurring materials the colours may vary slightly from those shown.

Texture

Most Yorkstones are supplied in a diamond sawn finish. This method of production gives a more consistent thickness and width to aid easier and quicker installation of the product. Greenmoor Rustic is first sawn and then flame textured to enhance its colour and slip resistance. Traditional Riven paving is still produced but special care should be taken when specifying this product.

Reserves

All Marshalls Yorkstones have at least 20 years' fully consented reserves although the actual reserves are generally much greater.

Lead Times

Lead times may vary throughout the year so please check the availability of all items with our Natural Stone sales office.
