Mistral Piora with reference numbers indicated in **bold** black are available ex-stock.  
Mistral Piora with reference numbers indicated in light black are manufactured to order. Contact our sales office to discuss your requirements.  
  
\*Where a herringbone laying pattern is specified, it is essential to order Herringbone Mistral Piora units which feature correctly placed nibs to ensure that full interlock is achieved. Attempts to lay standard large Mistral Piora units in a herringbone pattern will result in clashing nibs, wide joints and ultimately an unstable surface.

# Mistral Piora

Permeable Paving System

A striking, contemporary surface option which offers excellent drainage without the need for drainage channels. The exposed granite aggregate in the textured surface catches the light to lend a sophisticated edge to modern urban landscapes. The patented Piora nib featured on the edge of each block ensures that the pavement provides maximum structural integrity as well as unsurpassed SuDS performance.

In addition, during field tests undertaken in 2014, we have proven that the patented Marshalls Piora nib provides the surface with 40% more interlock than our standard block. This means that specifying Marshalls Piora blocks will bring long-term benefits in relation to pavement longevity and maintenance requirements - regardless of the intrinsic hydraulic benefits.
