TREES FACT SHEET: SCREENING

We can supply a range of trees for decorative or screening purposes.

Screening trees

These trees often have a clear stem to reach up to fence panel height of around 1.8-2m with a full-bushy canopy above this height. This type of screening is particularly useful if you are overlooked by neighbouring properties, draw the eye towards a specific feature, or would like to retain lower level exposure i.e. of an attractive wall or area.

We can also supply feathered trees that have full growth from the ground upwards and offer the same screening ability.

Generally, evergreens are preferred for this purpose and can be planted densely to achieve maximum effect from the offset. However, planting a selection of trees, if space allows, can provide rich contrast and seasonal interest.

Example of prices

Variety	Type	Clear Stem	Height	Girth	Price
Photinia fraseri 'Red Robin'	Screening, clear stem	1.8-2m	3.5-4m	25cm	£550
