Domestic gardens.
- **Flowering Time**  
Flowers from February to November (dependant on local weather conditions) peak flowering is from June to October.

**A glorious blend of native and non-native plants and grasses to attract and support pollinating insects.**

### Features

Biodiverse and pollinator-friendly providing a valuable source of nectar and food for many species of insects and birds.

Contains perennial, annual and bi-annual species to ensure a varied display each year.

Environmentally friendly requiring no fertilisers or pesticides.

A mixture of grasses and wildflowers for year round interest.

Low maintenance – does not require regular mowing.

Prefers a neutral pH but can tolerate acidic or alkaline soils - for best results this product requires installation on a low nutrient soil.

\*When grown the actual percentage of each species contained may vary due to environmental factors. Harrowden Turf makes every effort to ensure wildflower products are free from weeds seeds, however due to the natural way in which these seeds are collected we cannot guarantee they are 100% weed free on delivery. It is unlikely that you will see every species that is listed. The variation of species present has been developed to suit a wide variety of soils and environmental conditions. This will result in a wildflower area that will adapt to individual settings which may mean some species are more successful than others. Contains annual bi-annual and perennial species.

\*\*The RHS Plants for Pollinators mark is only given to plants that support pollinating insects. Find out more at [rhs.org.uk/plantsforpollinators](https://rhs.org.uk/plantsforpollinators)
