1000mm

This product is supplied by the single length

Face height: 100mm

Thickness: 1.6mm

Spike length: 95mm

Approximate weight: 1.6kg

*All measurements are approximate.*

## ■ Details

Flexible steel edging available in two colours, brown and Corten weathered finish. This edging is manufactured from 1.6mm mild steel making it both durable and easy to work with. The dual lock mechanism provides a secure and sturdy connection between two sections, making for quick and easy installation without the need for specialist tools. The brown finish is a 110-micron UV resistant power coating on top of a 20-micron galvanised zinc coating. This gives a long lasting finish for up to 15 years. The Corten finish has a stable rust-like appearance for a natural look.

For added strength, a 300mm rebar pin can be used to give added stability along the edge of drives or pathways. SUND-CEDGEPIN comes in packs of 5 and also fits our range of tree rings.

## ■ Colours

Powder Coated Brown - RAL 8028  
Corten Weathered Finish

## ■ Uses

Lawn and border edging  
Patio and path edging

**Important** - Corten steel products can have some rusted runoff as they weather, which can cause staining on certain surfaces.

**A durable edging suitable for a range of applications**
