

Timber Planters

Mobile Garden Bespoke Commission: Planting Benches, Arles Dufor Square, Oullins, France

Sineu Graff Planters provide elegant planting solutions for urban landscapes. Styles range from the traditional to the contemporary and include designs such as the Rendezvous and Optima which complement seating ranges. Sineu Graff source timber from sustainably managed forests and hold PEFC certification for wood of European origin and FSC certification for exotic woods.

The timber used in manufacture is protected using a water-based, solvent-free treatment. This is electrostatically-applied by a robotic pistol to an overall thickness of 135 microns when dry, giving the timber a smooth and natural finish whilst protecting it against water, insect and fungal ingress.

There are several shapes and sizes available in each style of planter. Should you wish to plant trees, we also offer a larger planter which is supplied with a galvanised steel liner, a water reservoir and fixed lifting points.

The large square planter is specially designed to accommodate large root bases and requirements for maximum available root space, it is supplied with height adjustable feet as standard.

A range of RAL (high gloss) or Sable (matt textured) colours are available for each model, please refer to individual product pages for more details.

Planters feature height adjustable stainless steel feet so that they can be levelled easily on gradients of up to 10% from horizontal.

Planters are supplied as standard with a galvanised steel liner with fixed lifting points or with the option of retractable steel lifting points (dependent on model). Standard galvanised liners also have a built in water reservoir to keep flower beds moist. In addition to the galvanised steel liner we can also supply a high-density moulded polyethylene liner, which also has an in built water reservoir and fixed lifting points only.

Bespoke commissions for planting solutions can be undertaken. The planting benches shown above were designed to meet the planning scope of the Arles Dufor Square. The landscape architect needed to provide a large relaxational area and enhance the built environment with planting. The solution, the planting benches, are particularly suited to urban areas where direct planting into the ground is not possible and provide a high quality, light and streamlined aesthetic.

Timber Planters

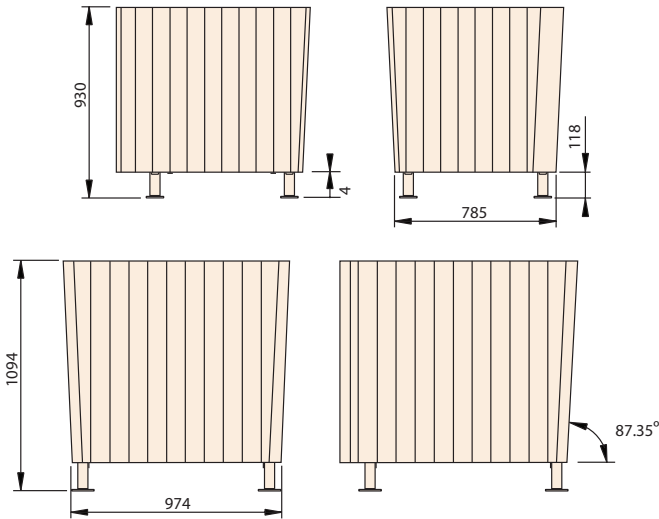

Rendezvous

Rendezvous Planters

- Designed to coordinate with the Rendezvous seat and litter bin, the Rendezvous planter draws its originality from a geometric shape and wooden, vertical slatted panels.
- The panels comprise of overlapping wooden slats, held together with supports on the inside of the panels to produce a perfect aesthetic. The rim and the upright supports are made of laser cut, bent sheet steel. Each support pole has an adjustable stainless steel foot.
- The wood is coated with water based solvent free stain emulsion. Steel parts are treated with the Powder Blast system; after cleaning and blasting, they are coated with a base layer of epoxy powder and an outer coating polyester powder.
- The support poles and rim are available in standard RAL colours.
- A galvanised steel liner with fixed handles and water reservoir is supplied as standard. Retractable steel handles are also available (dependent on model). Additionally, a high-density moulded polyethylene liner with fixed lifting points and water reservoir is also available.

Timber Planters

Roseraie

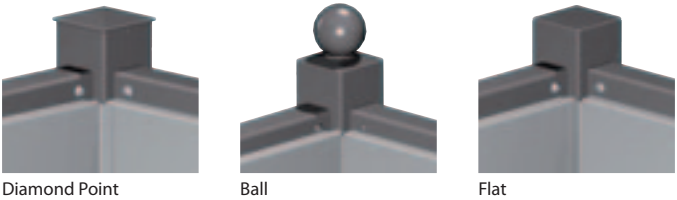

Roseraie Planters

- Roseraie Planters combine polyester powder coated steel with hardwood timber to create a fusion of natural and contemporary aesthetics. Posts are painted as standard in anthracite grey RAL 7016; other RAL (high gloss) or Sable (matt textured) colours are available on request.
- The Large Square model has 100 x 100 mm section corner posts and the Square and Rectangular models have 80 x 80 mm section corner posts.
- The side panels are constructed from 105mm wide and 20mm thick, narrow hardwood sections.
- Height adjustable stainless steel feet are supplied as standard.
- A galvanised steel liner with fixed handles and water reservoir is supplied as standard. Retractable steel handles or a high-density moulded polyethylene liner with fixed lifting points and water reservoir is available (dependent on model).
- A larger version of the Square Planter is also available, should you wish to use your planter to grow trees. Details can be found in the table below.
- The frame and posts are available in other RAL (high gloss) colours on request. Panel sections are a natural shade as standard and are also available in two other colours, moss green RAL 6005 and pure white RAL 9010.

Timber Planters

Festival Timber Planter **NEW!**

OLLERTON

- Ollerton Festival free standing planters combine an eye-catching design and quality timber craftsmanship, making an elegant statement in any urban environment.
- The panels comprise of solid slats of Iroko Hardwood from sustainable sources, fixed with stainless steel fastenings to wooden poles inside the container, to provide an unbendable, sophisticated finish.
- The wood is coated with water based, solvent free stain and each planter features an internal protective membrane, which protects both the plant and the furniture from potential water over spilling.
- The range of standard sizes include 1m, 1.25m and 1.5m Square planter; any bespoke sizes and shapes are available on request to meet the requirements of each project.
