

The Geo bench reflects the best of modern urban design: simplicity, sustainable and robust materials in a low profile form. The Geo bench is contemporary, yet its simple, discreet, unobtrusive lines make it equally suited to both historical and modern settings.

The Geo bench combines the highest quality 316 grade stainless steel with a shot peened finish and Iroko hardwood for excellent weather resilience and heavy usage durability. The bench can also be finished in your choice of any other FSC sustainable timber.

The Geo bench features immaculately laser-cut stainless steel endplates that enhance the flowing profile as two legs in galvanised and painted mild steel support the bench and provide contrast.
