Design has finally reached its goal – Refinement in unity and in detail. This charismatic bench profits from the modelled anatomy of its sideboard castings and is enhanced by the softly shaped upper lamella of the armrest. This is a carefully elaborated bench, and has been cultivated for the contours to flutter above the paving, bringing new craftsmanship standards to the field of street furniture. It creates the right contemporary counterbalance to the most valuable historical sites as well as humanizing modern areas already full of uncompromising architecture.

The sideboard is made from machined castings of aluminum alloy, the saddle and armrest of the lamella are made from solid wood. An original and solid-footing are fixed to the groundwork and pavement. It has also been newly shaped as a bollard from cast aluminium.
