The Challenge

Creating a striking landscape for a business quarter.

HLM Architects sought high quality, robust and cost effective paving to create a striking landscape at The Square, a new 68,851 square ft. business quarter in Leatherhead, Surrey.

Joe Harries, Associate at HLM Architects, explained that his aim in designing The Square was *“to create a contemporary office environment within a high quality and attractive landscape setting.”*

“Conceptually, we tried to create a contemporary, inspiring and inviting centralised hard landscaped amenity enclosed by both proposed and existing soft landscape infrastructure. The formal epicentre is the main focus of the scheme, with a large and striking public art feature, high quality paving, seating and subtle lighting.”

The Solution

Tobermore Manhattan, Sienna Duo & Shannon Duo.

A range of different hard landscaping solutions were considered for the project, paving was eventually chosen as the superior solution.

To keep with the contemporary theme, HLM Architects specified Tobermore Manhattan plank paving with sparkling granite aggregates in mixed lengths and colours for the main area and Sienna Duo in Sandstone for parking bays. Shannon Duo was specified for the walkways with a smooth surface layer, ideal for pedestrian and wheeled traffic. The use of contrasting products created a high quality finish for the site. Attractive planting and Tobermore’s natural look paving combined to create the perfect balance between practicality and aesthetic appeal.
