# Analog Devices Building, University of Limerick

**Architect** RKD  
**Landscape Architect** Brady Shipman Martin  
**Main Contractor** PJ Hegarty

## The Challenge

Hard landscaping required for Analog Devices Building at The University of Limerick.

The Analog Devices Building at the University of Limerick was constructed as part of the ground-breaking €54 million Bernal Project and was since awarded the Irish Building Project of the Year at the Irish Building and Design Awards 2016 in Dublin.

Manuel Smalis, Landscape Architect at Brady Shipman Martin, explained that Brady Shipman Martin's design objective was to *"create a high quality hard landscape that would complement the existing campus and offer a good lifestyle. We also wanted to achieve a low maintenance space with materials that would provide a low carbon footprint."*

## The Solution

Tegula block paving and Country Kerb.

Already familiar with Tobermore's superior product quality, Brady Shipman Martin liaised with Tobermore's ROI Sales team to source a suitable paving product for the project.

Manuel noted what impressed him most about Tobermore paving: *"The high quality finish, the environmental benefits and the retention of aesthetics over time exceeded expectation."*

Tobermore's popular Tegula block paving was selected as the best solution for the site. Tegula is manufactured with an aged, antique finish that creates a charming, traditional look for any application it is used on.

### Tegula

Plus: Q24 110 Create: 45-20-64/400

### Country Kerb

Plus: Q10 110 Create: 45-20-64/370

Plus: Q10 110 Create: 45-20-64/365

Brady Shipman Martin is very proud to have been involved in the award-winning design scheme and it's very pleasing to see how well our landscape design was brought to life on site. I would definitely recommend Tobermore paving products and will be using them again in future.
