**Client** Alphington Retail Park  
**Architect** CAD Architecture

## The Challenge

CAD Architecture sought paving and walling for the new 23,500 sq ft. Alphington Retail Park in Exeter.

John Patterson, Associate Architect at CAD Architecture, explained that the vision for the landscape at Alphington Retail Park was for “*block paving products to lend itself as a good contrast*” to the surrounding tarmacked groundworks.

## The Solution

Following a presentation from Tobermore's North West sales team, John said he “gained trust” in what Tobermore had to offer due to the undeniable quality of the samples and technical information provided.

John specified Tobermore Fusion block paving in the classic colour of Graphite and Mayfair Flags in the warm colour of Sandstone. Fusion and Mayfair Flags are contemporary products with a granite aggregate surface layer that produce a look similar to natural granite. The inclusion of Fusion and Mayfair Flags

Additionally the provision of retaining walls was an essential requirement for the scheme as the site is built on a flood plain. John was impressed with Tobermore's Secura Grand mortar-free retaining walls and following a visit to the company's 50 acre manufacturing plant at company headquarters, John said he “*was convinced that the spec had to be changed to Tobermore.*”

I'm very pleased with the overall scheme and would definitely recommend Tobermore products to other architects, contractors or developers.
