

THE GREEN BARRIER™

Non Acoustic Screens using Woven Willow

Environmentally engineered, sustainable and aesthetically pleasing, the Green Barrier provides instant screening. The woven Willow requires minimal maintenance and is ideal for use when ground conditions are too poor for planting a living hedge. The appearance of the screen can be complimented with many varieties of landscaping materials, including climbing plants, shrubs, trees and mulches.

Dried willow panels delivered and ready for installation.

The Green Barrier is ideal for commercial and industrial screening.

Woven willow screens provide instant privacy and blend in well with the surroundings. (Newly planted ivies are thriving on this Barrier)

The Woven panel provides an attractive appearance, complimented with trees and shrubs.

The pre-constructed panels are made to measure, generally being 2.5mtrs wide and up to a height of 3.5mtrs, with integral posts for easy installation. Panels can be installed on a soil bund to give additional height where conditions require it.
