

Newborough Two Tier System

Where space really is a premium and you need a cycle rack to accommodate a higher number of bikes into a limited space without compromising on security and safety - then you need the Newborough Two Tier System.

It's an extremely cost-effective system, especially popular within high density population areas such as inner city apartment blocks, offices and stations, and can be used to help demonstrate compliance with BREEM, too.

Manufactured from mild steel and the hot dipped galvanised as standard, the racks are designed for a long tough life of heavy use, with minimum maintenance required; and with a unique patented safety feature it ensures the racks are safe, secure and easy to use.
