

Lancillotto

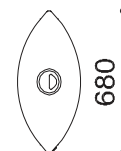

The Lancillotto Litter Bin is a slender, unobtrusive design with a small footprint that doesn't take up much space. Made from clad steel sheet with a fixed half-shell and the other with a hinge on the support. The bin includes a triangular key to allow the opening and removal of the plastic waste container. The ground support consists of a pair of steel pressed profile legs with an elliptic cover. The optional wall support is made from the same profile but with a rear support in steel sheet. A steel ashtray can also be incorporated into the cover.
