

Alhena

The Alhena Shelter is made up of a tubular steel bearing structure which features curved steel sheets on one side to give an elliptical profile. Inside the body there is an option for one of the legs to house a litter bin with a triangular key locking door to ensure safe storage and ease in removal of waste. Above this is an advertising space (with neon lighting available on request). A notice board with an aluminium frame with slam-lock is an option for the outer legs of the structure. On request, the shelter can be supplied with perforated sheet steel seat. Ground fixing with suitable bolts. Pre-drilled for anchors.
