Spider

Utilising traditional timber framing joints, this stylish and interesting large organic structure is lovingly handcrafted and very versatile.

The combination of seating to the rear, with anti-vandalism detailing, and huge Oak external seating blocks to the front means this shelter is ideal for larger social groups to gather.

The combination of galvanised steel sheet panels and oak cladding provides weather protection and shade.

Materials and finishes

Freshly sawn Oak structure with a combination of steel panels and oak cladding for the roof.

Steel sheet can also be added under the seats to discourage vandalism.

Installation and maintenance

Installation takes a number of days and the site needs to be level with the finished surfacing laid and a concrete pad in the middle to support the central column

Dimensions

Width	7200mm
Depth	6400mm
Height	4700mm
