

**Max Dimensions:**

Height: 415 mm | Width seat: 380 mm

Outer Diameter: 1130 mm | Inner diameter: 400 mm | Weight: 51 Kg

**Description:**

The seat/tree grille ALCORQUE 1 is made in steel of 40/10 thickness. The steel sheets, characterized by a particular laser-cut texture called New York, are joined together through a continuous welding, later polished. The seat is made of 8 elements: 3 seat modules (base + calendered wall + seat) and 5 base modules. These modules can be placed one next to the other to create different combinations. Under the steel seats 2 strong profiles h. 30 mm are welded, shaping the seat. On the base of the steel elements there are, on each one, 4 holes, 11 mm diam., for the fixing to the ground through specific bolts (not provided). For the realization of this product, Steel EN10111DD11 is used and later treated with a cycle of sandblasting, cataphoresis and powder coating. Such cycle is meant to guarantee the protection of the painted products, in an environment of C4 corrosion class, as requested by the UNI regulations EN ISO 12944-2. The products are eventually polyester-powder coated with RAL colours at choice. As an alternative to steel EN10111DD11, the production in corten

is also available, on demand. In this case the material is treated with a specific oxidation process.
