

Max Dimensions:

Height: 350 mm | Length: 850 mm | Width: 850 mm | Weight of steel: 40 kg

DESCRIPTION

The tree grille ALCORQUE RECTANGULAR is made of steel elements (50/10 thickness) and elements in exotic multi-layered wood, 30 mm thick, prism-shaped with a trapezoid-shaped base. The steel sheets, characterized by a particular laser-cut texture called New York, are welded together through a continuous welding, later polished. On the base of the steel and exotic wood elements there are 4 holes, 11 mm diam., for the fixing to the ground through specific bolts (not provided).

Steel EN10111DD11 is used for the realization of this product and all the elements in this material, after all the different stages (cutting, bending, welding), are treated with electrogalvanizing according to the UNI regulations and are later polyester powder-coated with RAL colours at choice.

As an alternative to steel EN10111DD11, the production in corten is also available, on demand. In this case the material is treated with a specific oxidation process.

The wood used is either Iroko or Okume, treated with natural, water-repellent, UV ray resistant oils.
