What is Galvanised Steel

Galvanization or galvanizing is the process of applying a protective zinc coating to steel or iron, to prevent rusting. The most common method is hot-dip galvanizing, in which the parts are submerged in a bath of molten zinc.

Galvanizing protects the underlying iron or steel in the following main ways:

- The zinc coating, when intact, prevents corrosive substances from reaching the underlying steel or iron.**
- The zinc protects iron by corroding first. For better results, the application of chromates over zinc is also seen as an industrial trend.**
- In the event the underlying metal becomes exposed, protection can continue as long as there is zinc close enough to be electrically coupled. After all of the zinc in the immediate area is consumed, localized corrosion of the base metal can occur.**

Benefits of our Galvanised Steel Range

- **5 Year Warranty** - Giving you piece of mind.
- **Corrosion resistant** - Iron Steel is coated with a layer of Zinc to produce a tough & durable metal material.
- **Long lasting** - Highly durable to stand the test of time.
- **Made to your spec** - Custom shapes and sizes available to order.
- **Application** - Ideal for Commercial and Residential use.
- **Robust** - Extremely strong & durable, perfect for public spaces.
- **Delivery** - Delivered free of charge across the UK mainland.

Bespoke Service

We can offer Galvanised Steel planters in almost any shape or size with our bespoke service.

Send over your requirements, and we will send you a quotation free of charge.

Our bespoke Galvanised Steel planters feature all the same benefits as our standard range.

For any Enquiries about our bespoke Galvanised Steel planters, please do hesitate to get in touch!!

Please call or email us to discuss your requirements.

Galvanised Steel Wall & Column Lights

- ▶ Our Galvanised steel Wall & Column Lights are a great choice for a modern setting, whether residential or commercial. With an industrial feel to these products, they suit a commercial setting exceptionally and look great when used in unison with our Galvanised steel planters. This range can be powder coated in any RAL colour of your choice, a real customer favourite as they are a great addition to any outdoor space, whether residential, commercial, traditional, or ultra modern, these products will enhance any space in which they are placed. A fantastic option if you are matching existing themes or decor, or just want to create a wonderful effect by adding a bit of colour to a space.
