

BIO-OXYGEN EUROPE

Air Sterilisation | Air Purification | Odour Control

Performance Guaranteed Air Sterilisation & Odour Control

Bio-Oxygen Europe has changed the air sterilisation and odour control market forever. Introducing proven technology previously unavailable to this region, this unique system sterilises using simply the oxygen present in ambient air.

Bio-Oxygen is the only air sterilisation system, which offers a Performance Guarantee to ensure we tackle your odour or sterilisation requirements to your satisfaction. Bio-Oxygen Europe provides solutions across all commercial applications from hospitals to restaurants, factories to sewage treatment plants. With over 37 years of achievement in this field, and following success in other worldwide markets, Bio-Oxygen Europe now offers the same environmentally friendly and effective odour control, air sterilisation and air purification in the UK & Europe.

Bio-Oxygen is a low voltage electronic system which is fitted inside the ventilation to clean the air and surfaces. Using only the oxygen in the ambient air, Bio-Oxygen removes odours, gases and chemicals in the air in less than 15 seconds. It actively removes bacteria, fungi, yeast, mould, mildew, protozoa and viruses.

Once installed the Bio-Oxygen system works in the air flow. It continually sterilises without any business down time for cleaning. Staff are free to continue working in the treated environment as the oxygen clusters are completely natural and safe for human health.

A photograph of a woman with dark hair, wearing a white long-sleeved shirt, looking upwards with her head tilted back and her right arm extended outwards. The background is a clear, bright blue sky.

sterilisation system
which provides
a Performance
Guarantee ”**

Bio-Oxygen is sustainable, safe, healthy, compact and low maintenance. The Bio-Oxygen Process does not require any Perfumes, Disinfectants, Chemicals or Catalysts and none are used. This unique system is not an Ioniser. We do not use carbon filters, UV or Ozone. Bio-Oxygen requires only ambient air.

All Bio-Oxygen equipment is manufactured directly from the Bio-Oxygen Australian factory and distributed worldwide. With regional bases in five continents Bio-Oxygen designs, sizes, installs, supports and maintains the system for their customers over the lifetime of the equipment. Based near London, Bio-Oxygen Europe is ideally located to support UK and Ireland, with further planned European offices.
