

Collaborative Wave™

Designed to complement evolving teaching methodologies, the Ferco Collaborative Wave is a unique seating system that can be used didactically but which also enables small group collaborative learning modes.

Developed to address new learning for a new generation, the Wave supports active learning and new pedagogic approaches including the 'flipped classroom'.

Featuring a pod of five contoured seats set around a curved desk, the Wave allows learners to seamlessly participate in tutor-to-student and student-to-student collaborative learning experiences.

Each of the ergonomic seats move away from the writing surface and rotate independently on a high strength steel arm – as well as auto-parking when unoccupied – whilst the curvature of the desk creates a large writing surface and ensures adequate room for maximum productivity.

- α Supports active learning and successful outcomes
- α Integrates with and supports technology / digital classrooms
- α Allows large single-use spaces to be transformed into versatile multiple-use spaces
- α Pod-based seating system promotes flexibility for study groups and meetings
- α Allows for maximisation of physical space within a lecture theatre
- α Curved desk creates a larger than average working surface
- α Contoured seat backs provide lumbar support and promote correct seating position
- α Optimises student engagement and facilitates a wide range of teaching styles
